STRIVE EMERGING MARKETS Ex-CHINA ETF
Ticker Symbol: STXE
Listed on New York Stock Exchange until December 14, 2026
Effective December 15, 2026 listed on NYSE Arca, Inc.

SUMMARY PROSPECTUS
October 31, 2026

https://strivefunds.com/

Before you invest, you may want to review the Fund's Prospectus and Statement of Additional Information ("SAI"), which contain more information about the Fund and its risks. The current Prospectus and SAI, each dated October 31, 2026, as supplemented from time to time, are incorporated by reference into this Summary Prospectus. You can find the Fund's Prospectus, reports to shareholders, and other information about the Fund, as well as recent information regarding the Fund, including its NAV, market price, premiums and discounts, and bid/ask spreads, online at https://strivefunds.com/stxe/. You can also get this information at no cost by calling 215-330-4476.

INVESTMENT OBJECTIVE

The Strive Emerging Markets Ex-China ETF (the "Fund") seeks to track the total return performance, before fees and expenses, of an index composed of emerging market, ex-China securities.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

ANNUAL FUND OPERATING EXPENSES (EXPENSES THAT YOU PAY EACH YEAR AS A PERCENTAGE OF THE VALUE OF YOUR INVESTMENT)

Management Fee	0.32%
Distribution and/or Service (12b-1) Fees	None
Other Expenses	0.00%
Total Annual Fund Operating Expenses	**0.32%**

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest $10,000 for the time periods indicated and then hold or sell all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:	Five Years:	Ten Years:
$33	$103	$180	$406

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. For the fiscal year ended June 30, 2026, the portfolio turnover rate for the Fund was 18% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund's Investment Strategy

The Fund seeks to track the investment results of the Bloomberg Emerging Markets ex China Large & Mid Cap Index (the "Index"), which tracks large and mid-capitalization equity securities across 24 emerging market economies, excluding China. Components of the Index (each an "Index Component" and collectively the "Index Components") are

selected and weighted according to free-float market capitalization. Under normal circumstances, the Fund invests at least 80% of its net assets (plus any borrowings for investment purposes) in emerging market securities, which may include depositary receipts (including American Depository Receipts ("ADRs") or Global Depository Receipts ("GDRs")). Depositary receipts represent shares in a foreign company that are traded on a local stock exchange.

The Index will generally consist of over 500 securities. The Index consists of issuers in the following emerging market countries: Brazil, Chile, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Kuwait, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Qatar, Saudi Arabia, South Africa, South Korea, Taiwan, Thailand, Turkey, and United Arab Emirates (each an "Emerging Market" and collectively, the "Emerging Markets"). The Index is expected to have significant exposure to India, Taiwan, and South Korea. The Index is expected to have significant exposure to the Information Technology and Financials sectors. The components of the Index and the Emerging Markets themselves will change over time.

Securities are first screened for inclusion in the "Index Universe." The Index Universe is exclusively comprised of equity securities, which includes common stock and real estate investment trusts (REITs) from issuers in Emerging Markets.

To determine the Index Components, all equity securities in the Index Universe are sorted by Emerging Market country. Thereafter, Index Components are individually selected for inclusion based on such factors as free float market capitalization, trading volume thresholds, and market price cap levels. Equity securities passing these thresholds are included as Index Components within each Emerging Market.

Thereafter, the Index Components are aggregated together and ranked by total market capitalization. Each Index Component is subsequently assigned a weight based on its free float market capitalization. The weight represents the percentage amount of the Index Component as a percentage of the total Index. Starting with the largest free float market capitalization, the Index is fully comprised once approximately 85% of the accumulated free float market-capitalization of the Index Universe is selected.

The Fund's exposure to any asset class, country or geographic region will vary from time to time as the weightings of the securities within the Index change, and the Fund may not be invested in each country or geographic region at all times. Bloomberg Index Services Limited (the "Index Provider") will generally deem an issuer to be located in an emerging market country based on several factors related to economic development, market size and liquidity, and capital market structure. The Index is calculated as a net total return index in U.S. dollars.

The Index is normally reconstituted on a semi-annual basis in March and September and rebalanced on a quarterly basis. New securities from initial public offerings generally must have traded for at least three months before the semi-annual reconstitution date to be considered for inclusion in the Index. Securities subject to United States, United Nations, United Kingdom or European Union sanctions may not be eligible for inclusion in the Index. Index Components impacted by such sanctions will be dropped from the Index as soon as practically possible.

Strive Asset Management, LLC (the "Sub-Adviser") uses a "passive" or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to "beat" the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued.

Indexing may eliminate the chance that the Fund will substantially outperform the Index but also may reduce some of the risks of active management, such as poor security selection. Indexing seeks to achieve lower costs and better after-tax performance by aiming to keep portfolio turnover low in comparison to actively managed investment companies.

The Fund will generally use a "representative sampling" strategy, meaning the Fund may invest in a sample of the securities in the Index whose risk, return and other characteristics closely resemble the risk, return and other characteristics of the Index as a whole, but may, when the Sub-Adviser believes it is in the best interests of the Fund, use a "replication" strategy to seek to achieve its investment objective, meaning the Fund will invest in all of the component securities of the Index in the same approximate proportions as in the Index. For example, the Fund may utilize a representative sampling strategy when the Sub-Adviser believes a replication strategy might be detrimental or disadvantageous to shareholders, such as when buying each security in the Index is impracticable or inefficient, when there are practical difficulties or additional costs involved in replicating the Index, or if one or more securities in the Index is illiquid, unavailable or less liquid. In addition, the Fund may use a representative sampling as a result of legal restrictions or limitations (such as tax diversification requirements) that apply to the Fund but not to the Index. The Fund will be reconstituted and rebalanced on the same schedule as the Index.

The Fund will concentrate its investments (*i.e.*, hold 25% or more of its total assets) in a particular industry or group of industries to approximately the same extent that the Index is concentrated.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective*. An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading "*Additional Information About the Funds' Principal Investment Risks.*"

Emerging Markets Risk. Investments in securities and instruments traded in developing or emerging markets, or that provide exposure to those securities or markets, can involve additional risks relating to political, economic, or regulatory conditions not associated with investments in U.S. securities and instruments. For example, developing and emerging markets may be subject to (i) greater market volatility, (ii) lower trading volume and liquidity, (iii) greater social, political and economic uncertainty, (iv) governmental controls on foreign investments and limitations on repatriation of invested capital, (v) lower disclosure, corporate governance, auditing and financial reporting standards, (vi) fewer protections of property rights, (vii) restrictions on the transfer of securities or currency, and (viii) settlement and trading practices that differ from those in U.S. markets. Each of these factors may impact the ability of the Fund to buy, sell or otherwise transfer securities, adversely affect the trading market and price for Shares and cause the Fund to decline in value.

Foreign Investment Risk. Returns on investments in foreign securities could be more volatile than, or trail the returns on, investments in U.S. securities. Investments in or exposures to foreign securities are subject to special risks, including risks associated with foreign securities generally. Those special risks may arise due to differences in information available about issuers of securities and investor protection standards applicable in other jurisdictions; capital controls risks, including the risk of a foreign jurisdiction imposing restrictions on the ability to repatriate or transfer currency or other assets; currency risks; political, diplomatic and economic risks; regulatory risks; and foreign market and trading risks, including the costs of trading and risks of settlement in foreign jurisdictions.

Geographic Investment Risk. From time to time the Fund may invest a substantial amount of its assets in issuers located in a single country or a limited number of countries. If the Fund focuses its investments in this manner, risks relating to economic, political and social conditions in those countries will have a significant impact on its investment performance. The Fund's investment performance may be more volatile if it focuses its investments in certain countries, especially emerging markets.

- *Investing in India Risk*. Investments in Indian issuers involve risks that are specific to India, including legal, regulatory, political, currency and economic risks. Political and legal uncertainty, greater government control over the economy, currency fluctuations or blockage, and the risk of nationalization or expropriation of assets may result in higher potential for losses. The securities markets in India are relatively underdeveloped and may subject the Fund to higher transaction costs or greater uncertainty than investments in more developed securities markets.
- *Investing in Taiwan Risk*. The economy of Taiwan is heavily dependent on exports. Currency fluctuations, increasing competition from Asia's other emerge economies, and conditions that weaken demand for Taiwan's export products worldwide could have a negative impact on the Taiwanese economy as a whole. Concerns over Taiwan's history of political contention and its current relationship with China may also have a significant impact on the economy of Taiwan.
- *Investing in South Korea Risk*. The Fund is susceptible to adverse market, political, regulatory and geographic events affecting South Korea. The South Korean economy is dependent on the economies of other Asian countries, especially China and Southeast Asia, and the United States as key trading partners. Furthermore, South Korea's economy may be significantly affected by currency fluctuations and increasing competition from Asia's other low-cost emerging economies. Also, tensions with North Korea could escalate and lead to further uncertainty in the political and economic climate of South Korea.

Depositary Receipt Risk. The risks of investments in depositary receipts, including American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"), are substantially similar to Foreign Investment Risk. In addition, depositary receipts may not track the price of the underlying foreign securities, and their value may change materially at

times when the U.S. markets are not open for trading. In addition, the underlying issuers of certain depositary receipts, particularly unsponsored or unregistered depositary receipts, are under no obligation to distribute shareholder communications to the holders of such receipts, or to pass through any voting rights with respect to the deposited securities. Therefore, the Sub-Adviser will not be able to vote on any matters with respect to these instruments.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. Therefore, you may lose money by investing in the Fund. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security, such as geopolitical events and environmental disasters. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund. **Equity Investing Risk.** An investment in the Fund involves risks similar to those of investing in any fund holding equity securities, such as market fluctuations, changes in interest rates and perceived trends in stock prices. The values of equity securities could decline generally or could underperform other investments. In addition, securities may decline in value due to factors affecting a specific issuer, market or securities markets generally.

Large-Capitalization Companies Risk. Large-capitalization companies may trail the returns of the overall stock market. Large-capitalization stocks tend to go through cycles of doing better - or worse - than the stock market in general. These periods have, in the past, lasted for as long as several years. When large capitalization companies are out of favor, these securities may lose value or may not appreciate in line with the overall market. In addition, large capitalization companies may be unable to respond quickly to new competitive challenges, such as changes in technology or consumer tastes, and also may not be able to attain the high growth rate of successful small companies, especially during extended periods of economic expansion.

Mid-Capitalization Companies Risk. The securities of mid-capitalization companies may be more vulnerable to adverse issuer, market, political, or economic developments than securities of larger-capitalization companies. The securities of mid-capitalization companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger capitalization stocks or the stock market as a whole. Some of these companies have limited product lines, markets, and financial and managerial resources and tend to concentrate on fewer geographical markets relative to larger capitalization companies.

Sector Risk. To the extent the Fund invests more heavily in particular sectors of the economy, its performance will be especially sensitive to developments that significantly affect those sectors. The Fund may invest a significant portion of its assets in the following sectors and, therefore, the performance of the Fund could be negatively impacted by events affecting each of these sectors.

- *Financials Sector Risk.* The Fund is expected to have exposure to companies in the financials sector, and therefore, the Fund's performance could be negatively impacted by events affecting this sector. The financials sector includes, for example, banks and financial institutions providing mortgage and mortgage related services. This sector can be significantly affected by, among other things, changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, and the availability and cost of capital.
- *Information Technology Sector Risk.* The Fund may invest in companies in the technology sector, and therefore, the Fund's performance could be negatively impacted by events affecting this sector. Market or economic factors impacting technology companies and companies that rely heavily on technological advances could have a significant effect on the value of the Fund's investments. Technology companies, including information technology companies, may have limited product lines, financial resources and/or personnel. Technology companies typically face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights. Companies in the technology sector also face increased government regulation, including new regulations and scrutiny related to data privacy, and may be subject to adverse government or regulatory actions, which may be costly.

Real Estate Investment Trusts (REITs) Risk. A REIT is a company that owns or finances income-producing real estate. Through its investments in REITs, the Fund is subject to the risks of investing in the real estate market, including decreases in property revenues, increases in interest rates, increases in property taxes and operating expenses, legal and regulatory changes, a lack of credit or capital, defaults by borrowers or tenants, environmental problems and natural disasters. Investments in REITs may be volatile. REITs are pooled investment vehicles with their own fees and expenses and the Fund will indirectly bear a proportionate share of those fees and expenses.

Concentration Risk. In following its methodology, the Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or group of industries. To the extent that the Index concentrates in the securities of issuers in a particular industry or group of industries, the Fund also may concentrate its investments to approximately the same extent. By concentrating its investments in an industry or group of industries, the Fund may face more risks than if it were diversified broadly over numerous industries or groups of industries. If the Index is not concentrated in a particular industry or group of industries, the Fund will not concentrate in a particular industry or group of industries.

Passive Investment Risk. The Fund is not actively managed and the Sub-Adviser will not sell any investments due to current or projected underperformance of the securities, industries or sector in which it invests, unless the investment is removed from the Index, sold in connection with a rebalancing of the Index as addressed in the Index methodology, or sold to comply with the Fund's investment limitations (for example, to maintain the Fund's tax status). The Fund will maintain investments until changes to its Index are triggered, which could cause the Fund's return to be lower than if the Fund employed an active strategy.

Index Calculation Risk. The Index relies on various sources of information to assess the criteria of issuers included in the Index, including fundamental information that may be based on assumptions and estimates. Neither the Fund, the Adviser, the Sub-Adviser nor the Index Provider can offer assurances that the Index's calculation methodology or sources of information will provide a correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.

Tracking Error Risk. As with all index funds, the performance of the Fund and its respective Index may differ from each other for a variety of reasons. For example, the Fund incurs operating expenses and portfolio transaction costs not incurred by the Index. In addition, the Fund may not be fully invested in the securities of the Index at all times or may hold securities not included in the Index. In addition, the Fund's use of a representative sampling approach may cause the Fund's returns to not be as well correlated with the return of the Index as would be the case if the Fund purchased all of the securities in the Index in the proportions in which they are represented in the Index.

Sampling Risk. The Fund's use of a representative sampling approach will result in it holding a smaller number of securities than are in the Index. As a result, an adverse development respecting a security held by the Fund could result in a greater decline in NAV than would be the case if the Fund held all of the securities in the Index. Conversely, a positive development relating to a security in the Index that is not held by the Fund could cause the Fund to underperform the Index. To the extent the Fund's assets are smaller, it may be more difficult to effectively implement a representative sampling strategy, which could increase these risks.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the New York Stock Exchange (through December 14, 2026) or NYSE Arca, Inc. (beginning December 15, 2026), as applicable (the "Exchange") or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in

Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.

- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if the Fund's Shares have more trading volume and market liquidity and higher if the Fund's Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund's trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity (which is often the case for funds that are newly launched or small in size).
- *Cash Redemption Risk.* The Fund's investment strategy may require it to redeem shares for cash or to otherwise include cash as part of its redemption proceeds. The Fund may be required to sell or unwind portfolio investments to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have recognized if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gain distributions than if the in-kind redemption process was used.

Index Rebalance Risk. The Index's composition is updated only at scheduled intervals, as described above under "Principal Investment Strategies," using data as of a date before each update takes effect. As a result, the Index's holdings may reflect market conditions at or near that date that do not persist, and changes to the Index's composition may lag significant market movements until the next scheduled update. The Index Provider may postpone a scheduled update due to unusual market conditions. In addition, the Fund generally buys and sells securities in connection with Index updates, which may cause it to incur higher transaction costs or trade at less favorable prices.

PERFORMANCE

The following information provides some indication of the risks of investing in the Fund. The bar chart shows the Fund's performance for calendar years ended December 31. The table shows how the Fund's average annual returns for one-year and since inception periods compare with those of its Index, which represents a broad measure of market performance. The Fund's past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future. Performance information is also available on the Fund's website at https://strivefunds.com/ or by calling the Fund at (215) 330-4476.

Calendar Year Total Returns as of December 31

The Fund's calendar year-to-date return as of September 30, 2026 was 40.81%.

During the period of time shown in the bar chart, the Fund's highest return for a calendar quarter was 14.44% (quarter ended June 30, 2025) and the Fund's lowest return for a calendar quarter was -6.74% (quarter ended December 31, 2024).

Average Annual Total Returns
(for periods ended December 31, 2025)

Strive Emerging Markets Ex-China ETF	**1 Year**	**Since Inception (01/30/2023)**
Return Before Taxes	34.02%	16.04%
Return After Taxes on Distributions	33.05%	15.41%
Return After Taxes on Distributions and Sale of Shares	20.63%	12.52%
Bloomberg Emerging Markets Ex-China Large & Mid-Cap Index (reflects no fees, expenses, or taxes)	32.49%	16.53%

After-tax returns are calculated using the highest historical individual U.S. federal marginal income tax rates during the period covered by the table above and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their Shares through tax-deferred arrangements such as an individual retirement account ("IRA") or other tax-advantaged accounts.

INVESTMENT ADVISER & INVESTMENT SUB-ADVISER

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the "Adviser")
Investment Sub-Adviser: Strive Asset Management, LLC (the "Sub-Adviser")

PORTFOLIO MANAGERS

Matthew Cole, Chief Executive Officer and Chief Investment Officer of Strive and Chris Nicholson, Vice President and Head of Research of Strive, are each a co-Portfolio Manager of the Fund and are primarily responsible for the day-to-day management of the Fund. Mr. Cole has managed the Fund since its inception (January 2023) and Mr. Nicholson has managed the Fund since September 2026.

PURCHASE AND SALE OF SHARES

Individual Shares are listed on a national securities exchange and may only be purchased and sold in the secondary market through a broker-dealer at a market price. Because Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (at a "premium") or less than NAV (at a "discount"). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying and selling Shares in the secondary market (the "bid/ask spread").

TAX INFORMATION

The Fund's distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an IRA or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
