STRIVE TOTAL RETURN BOND ETF

Fund Summary

INVESTMENT OBJECTIVE

The Strive Total Return Bond ETF (the “Fund”) seeks to maximize total return.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

ANNUAL FUND OPERATING EXPENSES (EXPENSES THAT YOU PAY EACH YEAR AS A PERCENTAGE OF THE VALUE OF YOUR INVESTMENT)

Management Fee	0.49%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ¹	0.01%
Total Annual Fund Operating Expenses	0.50%

¹ “Other Expenses” includes acquired fund fees and expenses (“AFFE”) of 0.01%. AFFE are indirect costs of the Fund’s investments in other investment companies during the period. As a result, “Total Annual Fund Operating Expenses” in the table above do not correlate to the ratio of operating expenses to average net assets after reimbursements found within the “Financial Highlights” section of this prospectus, which does not include AFFE.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:	Five Years:	Ten Years:
\$51	\$160	\$280	\$628

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal period from August 9, 2023 (commencement of Fund operations), through July 31, 2024, the Fund’s portfolio turnover rate was 51% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund’s Investment Strategy

The Fund is an actively managed exchange-traded fund (“ETF”) that under normal conditions, invests at least 80% of its net assets (plus borrowings for investment purposes) in a portfolio of bonds of varying maturities. The Fund’s 80% investment policy is non-fundamental and may be changed upon 60 days’ notice to shareholders.

For purposes of this 80% Policy, the Fund will invest in a wide range of “bonds,” including agency and non-agency residential mortgage-backed securities (“RMBS”), commercial mortgage-backed securities (“CMBS”), collateralized loan obligations (“CLOs”), collateralized debt obligations (“CDOs”), collateralized mortgage obligations (“CMOs”), collateralized bond obligations (“CBOs”), asset-backed securities (“ABS”), including securities or securitizations backed by assets such as credit card receivables, student loans, automobile loans, and

residential and commercial real estate, and other debt securitizations (collectively, “Structured Products”), mortgage loans, secured and unsecured consumer loans, commercial loans and pools of such loans (collectively, “Loans”), corporate debt, including bank-issued subordinated debt (which includes subordinated debt issued by community banks), municipal securities, U.S. Treasury and U.S. government agency securities, and derivative instruments that invest substantially all of their assets in, are linked to, or otherwise provide investment exposure to, bonds.

The Fund will concentrate its investments in agency and non-agency RMBS and CMBS and mortgage loans (“Mortgage Related Instruments”). This means that, under normal circumstances, the Fund will invest more than 25% of its assets in Mortgage Related Instruments (measured at the time of purchase). The Fund will not concentrate its investments in any other group of industries. The Fund’s policy to concentrate its investments in Mortgage Related Instruments is fundamental and may not be changed without shareholder approval.

The Fund may invest, without limitation, in bonds of any quality and maturity. The fixed income instruments in which the Fund invests may include those of issuers from the United States and other countries, without limitation. The Fund’s investments in foreign debt securities will typically be denominated in U.S. dollars.

The Fund’s average portfolio duration is expected to vary from two to nine years. Duration is a measure of the Fund’s price sensitivity to changes in yields or interest rates. Duration incorporates a security’s yield, coupon, final maturity, call and put features, and prepayment exposure into one measure with a higher duration indicating greater sensitivity to interest rates. For example, if a portfolio has a duration of one year, and interest rates increase (or, conversely, decrease) by 2%, the portfolio would decline (or increase, respectively) in value by approximately 2%. However, duration may not accurately reflect the true interest rate sensitivity of instruments held by the Fund and, therefore, the Fund’s exposure to changes in interest rates.

The Fund may invest up to 30% of its assets in high yield securities (“junk bonds”). High yield securities will be rated BB+ or lower by Standard & Poor’s (“S&P”) or will be of an equivalent quality rating from another Nationally Recognized Statistical Ratings Organization. If a bond is unrated, Angel Oak Capital Advisors, LLC (“Angel Oak”), a sub-adviser to the Fund, may determine whether it is of comparable quality and therefore eligible for the Fund’s investment.

The Fund may invest up to 15% of its net assets in investments that are deemed to be illiquid, which may include private placements, certain Rule 144A securities (which are subject to resale restrictions), and securities of issuers that are bankrupt or in default.

The Fund may invest in other investment companies, including closed-end investment companies and open-end investment companies, which may operate as traditional mutual funds, ETFs or business development companies (“BDCs”).

In pursuing its investment objective or for hedging purposes, the Fund may utilize borrowing and may also invest, without limitation, in derivatives instruments such as options, futures contracts, or swap agreements or in mortgage-backed securities (TBAs). These derivatives may be traded over the counter or on an exchange and may be used for speculative purposes, currency hedging, duration management or to pursue the Fund’s investment objective. The Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Fund may borrow up to one-third of its total assets. The Fund may also invest in repurchase agreements and borrow through reverse repurchase agreements.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Empowered Funds, LLC, dba EA Advisers (the “Adviser”), serves as the investment adviser to the Fund. The Adviser oversees the day-to-day affairs of the Fund and supervises the Fund’s sub-advisers.

Strive Asset Management, LLC (“Strive”), serves as a sub-adviser to the Fund. As a sub-adviser, Strive is responsible for determining the Fund’s sector allocations and target duration. The Fund’s allocation of its assets into various asset classes within its investment strategy will depend on the views of Strive as to the best value relative to what is currently presented in the marketplace. Strive’s portfolio management determinations will be based on market conditions, fundamentals, technicals, interest rate and total return scenario analysis, monetary and fiscal

conditions, FOMC outlook, macroeconomics, market liquidity, and geopolitical risks – with a goal of maximizing risk-adjusted returns without regard to any non-pecuniary factors.

Angel Oak is also a sub-adviser to the Fund. Angel Oak is responsible for implementing Strive’s sector allocations and duration target by selecting investments and executing Fund transactions in accordance with such sector allocations and duration target, subject to the investment objective, policies and limitations of the Fund. Angel Oak and Strive are referred to herein as the “Sub-Advisers.”

Angel Oak’s investment decisions are made based on fundamental research and analysis to identify issuers with the ability to improve their credit profile over time with attractive valuations, resulting in both income and potential capital appreciation. In selecting investments, including Structured Products, Angel Oak may consider maturity, yield and ratings information and opportunities for price appreciation among other criteria. Angel Oak also analyzes a variety of factors when selecting investments for the Fund, such as collateral quality, credit support, structure and market conditions. Angel Oak attempts to diversify risks that arise from position sizes, geography, ratings, duration, deal structure and collateral values. Angel Oak seeks to limit risk of principal by targeting assets that it considers undervalued.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading “*Additional Information About the Funds’ Principal Investment Risks.*”

Debt Securities Risks.

- *Credit Risk.* The financial condition of an issuer of a debt security or other instrument may cause such issuer to default, become unable to pay interest or principal due or otherwise fail to honor its obligations or cause such issuer to be perceived (whether by market participants, rating agencies, pricing services or otherwise) as being in such situations. The value of an investment in the Fund may change quickly and without warning in response to issuer defaults, changes in the credit ratings of the Fund’s portfolio investments and/or perceptions related thereto.
- *Interest Rate Risk.* Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Interest rate changes can be sudden and unpredictable, and the Fund may lose money as a result of movements in interest rates. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates.
- *Prepayment Risk.* The risk that the issuer of a debt security repays all or a portion of the principal prior to the security’s maturity. In times of declining interest rates, there is a greater likelihood that the Fund’s higher yielding securities will be pre-paid with the Fund being unable to reinvest the proceeds in an investment with as favorable a yield. Prepayments can therefore result in lower yields to shareholders of the Fund.
- *Extension Risk.* An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.
- *Issuer-Specific Changes.* Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security’s or instrument’s credit quality or value. Entities providing credit support or a

maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.

Mortgage-Backed and Asset Backed Securities Risk. Mortgage-backed and asset-backed securities represent interests in “pools” of mortgages or other assets, including consumer loans or receivables held in trust. Mortgage-backed securities are subject to “prepayment risk” (the risk that borrowers will repay a loan more quickly in periods of falling interest rates) and “extension risk” (the risk that borrowers will repay a loan more slowly in periods of rising interest rates). If the Fund invests in mortgage-backed or asset-backed securities that are subordinated to other interests in the same pool, the Fund may only receive payments after the pool’s obligations to other investors have been satisfied. An unexpectedly high rate of defaults on the assets held by a pool may limit substantially the pool’s ability to make payments of principal or interest to the Fund, reducing the values of those securities or in some cases rendering them worthless. The Fund’s investments in other asset-backed securities are subject to risks similar to those associated with mortgage-backed securities, as well as additional risks associated with the nature of the assets and the servicing of those assets.

To-Be-Announced (“TBA”) Transactions Risk. TBA purchase commitments involve a risk of loss if the value of the securities to be purchased declines prior to settlement date or if the counterparty may not deliver the securities as promised. Selling a TBA involves a risk of loss if the value of the securities to be sold goes up prior to settlement date. TBA transactions involve counterparty risk. Default or bankruptcy of a counterparty to a TBA transaction would expose the Fund to potential loss and could affect the Fund’s returns.

Dollar Roll Transaction Risk. The Fund may enter into dollar roll transactions, in which the Fund sells a mortgage-backed or other security for settlement on one date and buys back a substantially similar security for settlement at a later date. Dollar rolls involve a risk of loss if the market value of the securities that the Fund is committed to buy declines below the price of the securities the Fund has sold.

Derivatives Risk. The risk of investing in derivative instruments (such as futures, swaps and structured securities), including leverage, liquidity, interest rate, market, credit and management risks, and valuation complexity. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and the Fund could lose more than the initial amount invested. The Fund’s use of derivatives may result in losses to the Fund, a reduction in the Fund’s returns and/or increased volatility. Over the counter (“OTC”) derivatives are also subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally-cleared derivative transactions might not be available for OTC derivatives. The primary credit risk on derivatives that are exchange-traded or traded through a central clearing counterparty resides with the Fund’s clearing broker or the clearinghouse. Changes in regulation relating to a fund’s use of derivatives and related instruments could potentially limit or impact the Fund’s ability to invest in derivatives, limit the Fund’s ability to employ certain strategies that use derivatives and/or adversely affect the value of derivatives and the Fund’s performance.

Structured Products Risk. The Fund may invest in Structured Products, including CLOs, CDOs, CMOs, and other asset-backed securities and debt securitizations. Some Structured Products have credit ratings but are typically issued in various classes with various priorities. Normally, Structured Products are privately offered and sold (that is, they are not registered under the securities laws), which means less information about the security may be available as compared to publicly offered securities and only certain institutions may buy and sell them. As a result, investments in Structured Products may be characterized by the Fund as illiquid securities. An active dealer market may exist for Structured Products that qualify for Rule 144A transactions, but there can be no assurance that such a market will exist or will be active enough for the Fund to sell such securities. In addition to the typical risks associated with fixed-income securities and asset-backed securities, CLOs and CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the risk that the collateral may default, decline in value or quality or be downgraded by a rating agency; (iii) the Fund may invest in tranches of Structured Products that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; (v) risk of forced “fire sale” liquidation due to technical defaults such as coverage test failures; and (vi) the Structured Product’s manager may perform poorly. The senior and junior tranches of Structured Products may have floating or variable interest rates based on SOFR or other benchmark interest rate. The Fund may also invest in the equity tranches of a Structured Product, which typically

represent the first loss position in the Structured Product, are unrated and are subject to higher risks. Equity tranches of Structured Products typically do not have a fixed coupon and payments on equity tranches will be based on the income received from the underlying collateral and the payments made to the senior tranches, both of which may be based on floating rates based on SOFR.

Unrated Securities Risks. Unrated securities may be less liquid than comparable rated securities and involve the risk that Angel Oak may not accurately evaluate the security's comparative credit rating.

Hedging Risk. A hedge is an investment made in order to reduce the risk of adverse price movements in a security, (including currencies), by taking an offsetting position in a related instrument or basket of instruments (often a derivative, such as an option or a short sale). While hedging strategies can be very useful and inexpensive ways of reducing risk, they are sometimes ineffective due to unexpected changes in the market. Hedging also involves the risk that changes in the value of the related instrument or basket of securities will not match those of the instruments being hedged as expected, in which case any losses on the instruments being hedged may not be reduced.

Defaulted Securities Risk. Investments in defaulted securities and obligations of distressed issuers, including securities that are, or may be, involved in reorganizations or other financial restructurings, either out of court or in bankruptcy, involve substantial risks in addition to the risks of investing in high-yield debt securities. The Fund's share price may decline if the reorganization or restructuring is not completed as anticipated. The Fund will generally not receive interest payments on the distressed securities and may incur costs to protect its investment. Repayment of defaulted securities and obligations of distressed issuers is subject to significant uncertainties. The Fund could lose its entire investment in such securities.

Municipal Securities Risk. Litigation, legislation or other political events, local business or economic conditions or the bankruptcy of the issuer could have a significant effect on the ability of an issuer of municipal securities to make payments of principal and/or interest. Political changes and uncertainties in the municipal market related to taxation, legislative changes or the rights of municipal security holders can significantly affect municipal securities. Because many securities are issued to finance similar projects, especially those relating to education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. In addition, changes in the financial condition of an individual municipal issuer can affect the overall municipal market. If the Internal Revenue Service ("IRS") determines that an issuer of a municipal security has not complied with applicable tax requirements, interest from the security could become taxable and the security could decline significantly in value.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. Therefore, you may lose money by investing in the Fund. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security, such as geopolitical events and environmental disasters. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

U.S. Government Securities Risk. The Fund may invest in U.S. Treasury obligations and securities issued or guaranteed by the U.S. Treasury. U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding that these securities are backed by the full faith and credit of the United States, circumstances could arise that would prevent the payment of interest or principal. This would result in losses to the Fund.

Management Risk. The Fund is actively managed and the Sub-Advisers' ability to choose suitable investments and implement the strategies described above has a significant impact on the ability of the Fund to achieve its investment objectives. In addition, there is the risk that the investment process, techniques and analyses used by the Sub-Advisers will not produce the desired investment results and the Fund may lose value as a result.

High-Yield Debt Securities (Junk Bonds) Risk. High-yield securities (also known as "junk bonds") carry a greater degree of risk and are considered speculative by the major credit rating agencies. High-yield securities may be issued by companies that are restructuring, are smaller and less creditworthy, or are more highly indebted than other

companies. This means that they may have more difficulty making scheduled payments of principal and interest. Changes in the value of high-yield securities are influenced more by changes in the financial and business position of the issuing company than by changes in interest rates when compared to investment grade securities. High-yield securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. The Fund's investments in high-yield securities expose it to a substantial degree of credit risk. These investments are considered speculative under traditional investment standards. Prices of high-yield securities will rise and fall primarily in response to actual or perceived changes in the issuer's financial health, although changes in market interest rates also will affect prices. High-yield securities may experience reduced liquidity and sudden and substantial decreases in price.

Foreign Fixed-Income Investment Risk. Investments in fixed-income securities of non-U.S. issuers are subject to the same risks as other debt securities, notably credit risk, market risk, interest rate risk and liquidity risk, while also facing risks beyond those associated with investments in U.S. securities. For example, foreign securities may have relatively low market liquidity, greater market volatility, decreased publicly available information, and less reliable financial information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice, including recordkeeping standards, comparable to those applicable to domestic issuers. Foreign securities also are subject to the risks of expropriation, nationalization, political instability or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions and higher transactional costs.

Financial Services Sector Risk. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, changes in government regulations, economic conditions, and interest rates, credit rating downgrades, and decreased liquidity in credit markets. The impact of changes in capital requirements and recent or future regulation of any individual financial company, or of the financials sector as a whole, cannot be predicted. In recent years, cyberattacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses to companies in this sector, which may negatively impact the Fund.

Illiquid Investments Risk. The Fund may, at times, hold illiquid investments, by virtue of the absence of a readily available market for certain of its investments, or because of legal or contractual restrictions on sales. The Fund could lose money if it is unable to dispose of an investment at a time or price that is most beneficial to the Fund.

Repurchase Agreement Risk. Repurchase agreements typically involve the acquisition by the Fund of fixed-income securities from a selling financial institution such as a bank or broker-dealer. The Fund may incur a loss if the other party to a repurchase agreement is unwilling or unable to fulfill its contractual obligations to repurchase the underlying security.

Reverse Repurchase Agreement Risk. A reverse repurchase agreement is the sale by the Fund of a debt obligation to a party for a specified price, with the simultaneous agreement by the Fund to repurchase that debt obligation from that party on a future date at a higher price. Similar to borrowing, reverse repurchase agreements provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. Reverse repurchase agreements also involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of securities.

Variable and Floating Rate Securities Risk. Floating or variable rate securities pay interest at rates that adjust in response to changes in a specified interest rate or reset at predetermined dates (such as the end of a calendar quarter). Securities with floating or variable interest rates are generally less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When a Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the NAV of the Fund's shares.

Liquidity Risk. Liquidity risk exists when particular investments are difficult to purchase or sell. Markets may become illiquid when, for example, there are few, if any, interested buyers or sellers or when dealers are unwilling

or unable to make a market for particular securities. As a general matter, dealers recently have been less willing to make markets for fixed income securities. The Fund's investments in illiquid securities may reduce the return of the Fund because it may be unable to sell the illiquid securities at an advantageous time or price. Investments in foreign securities, derivatives (e.g., options on securities, securities indexes, and foreign currencies) and securities with substantial market or credit risk tend to have the greatest exposure to liquidity risk. Illiquid securities may also be difficult to value.

Real Estate Sector Risk. The risk that real estate-related investments may decline in value as a result of factors affecting the real estate sector, such as the supply of real property in certain markets, changes in zoning laws, delays in completion of construction, changes in real estate values, changes in property taxes, levels of occupancy, and local, regional, and general market conditions.

Borrowing and Leverage Risk. Borrowing for investment purposes or utilizing derivatives creates leverage, which will exaggerate the effect of any change in the value of securities in the Fund's portfolio on the Fund's net asset value and, therefore, may increase the volatility of the Fund. Money borrowed will be subject to interest and other costs (including commitment fees and/or the cost of maintaining minimum average balances). Unless the income and capital appreciation, if any, on securities acquired with borrowed funds exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Fund.

Rating Agencies Risk. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. In addition, rating agencies are subject to an inherent conflict of interest because they are often compensated by the same issuers whose securities they grade.

Concentration in Mortgage Loans, RMBS and CMBS Risk. The Fund's assets will be concentrated in mortgage loans, RMBS (agency and non-agency) and CMBS, potentially exposing the Fund to greater risks than companies that invest in multiple sectors. The risks of concentrating in mortgage loans, RMBS (agency and non-agency) and CMBS include susceptibility to changes in interest rates and the risks associated with the market's perception of issuers, the creditworthiness of the parties involved and investing in real estate securities.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the New York Stock Exchange (the "Exchange") or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if the Fund's Shares have more trading volume.

and market liquidity and higher if the Fund's Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.

- **Trading Risk.** Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund's trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity.

Cash Creation Unit Risk. Unlike most other ETFs, the Fund expects to effect a substantial portion of its creations and redemptions for cash, rather than in-kind securities (although redemptions will also be done in-kind under certain circumstances). The use of cash creations and redemptions may also cause the Fund's shares to trade in the market at greater bid-ask spreads or greater premiums or discounts to the Fund's NAV. As a practical matter, only institutions and large investors, such as market makers or other large broker dealers, also known as "authorized participants," create or redeem shares directly through the Fund. Most investors will buy and sell shares of the Fund on an exchange through a broker-dealer. Cash creation and redemption transactions may result in certain brokerage, tax, execution, price movement and other costs and expenses related to the execution of trades resulting from such transactions. To offset these expenses, the Fund will collect fees from the applicable authorized participant to reimburse the Fund for any costs incurred by the Fund that result from a cash creation or redemption. The use of cash for redemptions will limit the tax efficiency of the Fund.

Large Shareholder and Large-Scale Redemption Risk. Certain shareholders, including an Authorized Participant, a third-party investor, a market maker, or another entity, may from time to time own or manage a substantial amount of Fund shares, or may invest in the Fund and hold its investment for a limited period of time. There can be no assurance that any large shareholder or large group of shareholders would not redeem their investment. Redemptions of a large number of Fund shares could require the Fund to dispose of assets to meet the redemption requests, which can accelerate the realization of taxable income and/or capital gains and cause the Fund to make taxable distributions to its shareholders earlier than the Fund otherwise would have. In addition, under certain circumstances, non-redeeming shareholders may be treated as receiving a disproportionately large taxable distribution during or with respect to such year.

Underlying Fund Risk. Because the Fund may invest in other investment companies, including but not limited to BDCs and ETFs (collectively, "Underlying Funds"), the Fund's investment performance may depend on the investment performance of the Underlying Funds. An investment in the Fund is subject to the risks associated with the Underlying Funds in which the Fund invests. The Fund will indirectly pay a proportional share of the expenses of Underlying Funds in which it invests (which may include operating expenses and management fees). Some Underlying Funds may not produce qualifying income for purposes of the "Income Requirement," which must be met in order for each Fund to maintain its status as a regulated investment company under the Internal Revenue Code of 1986, as amended (the "Code"). If one or more Underlying Funds generates more non-qualifying income for purposes of the "Income Requirement" than the Fund's portfolio management expects, it could cause the Fund to inadvertently fail the "Income Requirement" thereby causing the Fund to inadvertently fail to qualify as a regulated investment company under the Code.

New Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have limited track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

Non-Diversification Risk. Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of the Fund's Shares and greater risk of loss.

PERFORMANCE

Performance information is not provided below because the Fund has not yet been in operation for a full calendar year. When provided, the information will provide some indication of the risks of investing in the Fund by showing how the Fund's average annual returns compare with a broad measure of market performance. Past performance

does not necessarily indicate how the Fund will perform in the future. Performance information is available on the Fund's website at www.strivefunds.com or by calling the Fund at (215) 330-4476.

INVESTMENT ADVISER & INVESTMENT SUB-ADVISER

Investment Adviser:	Empowered Funds, LLC dba EA Advisers (the "Adviser")
Investment Sub-Advisers:	Strive Asset Management, LLC ("Strive")
	Angel Oak Capital Advisors, LLC ("Angel Oak")

PORTFOLIO MANAGERS

Matthew Cole, Chief Executive Officer and Chief Investment Officer of Strive and Jeffrey Sherman, a Portfolio Manager of Strive, are each a co-Portfolio Manager of the Fund and have been primarily responsible for the day-to-day management of the Fund's sector allocations and duration target since its inception (August 2023).

Clayton Triick, Senior Portfolio Manager and Ward Bortz, ETF Portfolio Manager of Angel Oak, each have been primarily responsible for the day-to-day management of the security selection of the Fund since its inception (August 2023).

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis only in large blocks of Shares known as "Creation Units," and only APs (typically, broker-dealers) may purchase or redeem Creation Units. Creation Units generally are issued and redeemed 'in-kind' for securities and partially in cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Once created, individual Shares generally trade in the secondary market at market prices that change throughout the day. Market prices of Shares may be greater or less than their NAV. **Except when aggregated in Creation Units, the Fund's shares are not redeemable securities.**

TAX INFORMATION

The Fund's distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an Individual Retirement Account ("IRA") or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

STRIVE ENHANCED INCOME SHORT MATURITY ETF

Fund Summary

INVESTMENT OBJECTIVE

The Strive Enhanced Income Short Maturity ETF (the “Fund”) seeks to provide current income while seeking to minimize price volatility and maintain liquidity.

FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund (“Shares”). **You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the table or example.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fee	0.25%
Distribution and/or Service (12b-1) Fees	None
Other Expenses ¹	0.01%
Total Annual Fund Operating Expenses	0.26%

¹ “Other Expenses” includes acquired fund fees and expenses (“AFFE”) of 0.01%. AFFE are indirect costs of the Fund’s investments in other investment companies during the period. As a result, “Total Annual Fund Operating Expenses” in the table above do not correlate to the ratio of operating expenses to average net assets after reimbursements found within the “Financial Highlights” section of this prospectus, which does not include AFFE.

EXAMPLE

The following example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The example assumes that you invest \$10,000 for the time periods indicated and then redeem all of your Shares at the end of those periods. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. You may also pay brokerage commissions on the purchase and sale of Shares, which are not reflected in the example. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

One Year:	Three Years:	Five Years:	Ten Years:
\$27	\$84	\$146	\$331

PORTFOLIO TURNOVER

The Fund may pay transaction costs, including commissions when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. For the fiscal period from August 9, 2023 (commencement of Fund operations), through July 31, 2024, the Fund’s portfolio turnover rate was 83% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund’s Investment Strategy

The Fund is an actively-managed exchange-traded fund (“ETF”) that, using an enhanced cash strategy, seeks to achieve its investment objective, under normal circumstances, by investing at least 80% of its net assets (plus borrowings for investment purposes) in U.S.-dollar denominated investment-grade fixed- and floating-rate bonds, and debt securities. Under normal circumstances, the Fund will seek to maintain a dollar-weighted average maturity of less than two years and a dollar-weighted average duration of less than one year.

The Fund may invest in securities of any duration or maturity. Maturity refers to the length of time until a debt security’s principal is repaid with interest. Duration is a measure of the Fund’s price sensitivity to changes in yields or interest rates. Duration incorporates a security’s yield, coupon, final maturity, call and put features, and

prepayment exposure into one measure with a higher duration indicating greater sensitivity to interest rates. For example, if a portfolio has a duration of one year, and interest rates increase (or, conversely, decrease) by 2%, the portfolio would decline (or increase, respectively) in value by approximately 2%. However, duration may not accurately reflect the true interest rate sensitivity of instruments held by the Fund and, therefore, the Fund's exposure to changes in interest rates.

The Fund invests primarily in agency and non-agency residential mortgage-backed securities ("RMBS"), asset-backed securities ("ABS"), including securities or securitizations backed by assets such as credit card receivables, student loans, automobile loans, and residential and commercial real estate, collateralized loan obligations ("CLOs"), collateralized debt obligations ("CDOs"), collateralized mortgage obligations ("CMOs"), and other debt securitizations (collectively, "Structured Products"), corporate debt and other debt securities, and U.S. Treasury and U.S. government agency securities. The Fund may invest up to 25% of its net assets in CLOs.

The Fund may invest in other investment companies, including closed-end investment companies and open-end investment companies, which may operate as traditional mutual funds, ETFs or business development companies ("BDCs").

The Fund will concentrate its investments in agency and non-agency RMBS and CMBS and mortgage loans ("Mortgage Related Instruments"). This means that, under normal circumstances, the Fund will invest more than 25% of its assets in Mortgage Related Instruments (measured at the time of purchase). The Fund will not concentrate its investments in any other group of industries. The Fund's policy to concentrate its investments in Mortgage Related Instruments is fundamental and may not be changed without shareholder approval.

In pursuing its investment objective or for hedging purposes, the Fund may utilize borrowing and may also invest, without limitation, in derivatives instruments, including structured products, such as options, futures contracts, or swap agreements or in mortgage-backed securities (TBAs). These derivatives may be traded over-the-counter or on an exchange and may be used for speculative purposes, currency hedging, duration management or to pursue the Fund's investment objective. The Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Fund may borrow up to one-third of its total assets. The Fund may also invest in reverse repurchase agreements.

The fixed income instruments in which the Fund invests may include those of issuers from the United States and other countries. The Fund's investments in foreign debt securities will typically be denominated in U.S. dollars.

The Fund may invest up to 15% of its net assets in investments that are deemed to be illiquid, which may include private placements, certain Rule 144A securities (which are subject to resale restrictions), and securities of issuers that are bankrupt or in default.

The Fund may invest in high-yield securities and securities that are not rated by any rating agencies. These "high-yield" securities (also known as "junk bonds") will generally be rated BB+ or lower by Standard & Poor's Rating Group ("S&P") or will be of equivalent quality rating from another Nationally Recognized Statistical Ratings Organization. If a bond is unrated, Angel Oak Capital Advisors, LLC ("Angel Oak"), a sub-adviser to the Fund, may determine whether it is of comparable quality and therefore eligible for the Fund's investment. Although the Fund will not acquire investments of issuers that are in default at the time of investment, the Fund may hold such securities if an investment subsequently defaults.

The Fund will be considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

Empowered Funds, LLC, dba EA Advisers (the "Adviser"), serves as the investment adviser to the Fund. The Adviser oversees the day-to-day affairs of the Fund and supervises the Fund's sub-advisers.

Strive Asset Management, LLC ("Strive"), serves as a sub-adviser to the Fund. As a sub-adviser, Strive is responsible for determining the Fund's sector allocations and duration target. Strive's sector allocations and duration target will depend on its views of Strive's portfolio managers. Strive's sector allocations will be based on market conditions, fundamentals, technicals, interest rates and total return scenario analysis, monetary and fiscal conditions, FOMC outlook, macroeconomics, market liquidity, and geopolitical risks – with a goal of maximizing risk-adjusted returns without regard to any non-pecuniary factors.

Angel Oak is also a sub-adviser to the Fund. Angel Oak is responsible for implementing Strive' sector allocations and duration target by selecting investments and executing Fund transactions in accordance with such sector allocations and duration targets, subject to the investment objective, policies and limitations of the Fund. Angel Oak and Strive are collectively referred to herein as the "Sub-Advisers."

In pursuing its investment objective or for hedging purposes, the Fund may utilize borrowing, and various types of derivative instruments, including structured products, swaps, futures contracts, and options, although the Adviser expects that not all such derivatives will be used at all times. Such derivatives may trade over the counter or on an exchange and may principally be used for one or more of the following purposes: speculation, currency hedging, duration management, or to pursue the Fund's investment objective. The Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Fund may borrow up to one-third of its total assets. The Fund may also invest in reverse repurchase agreements.

Individual security selection decisions are made by Angel Oak and based on fundamental research and analysis to identify issuers with the ability to improve their credit profile over time with attractive valuations, resulting in both income and potential capital appreciation. In selecting investments, including Structured Products, the Sub-Advisers may consider maturity, yield, and ratings information and opportunities for price appreciation among other criteria. Angel Oak also analyzes a variety of factors when selecting investments for the Fund, such as collateral quality, credit support, structure and market conditions. Angel Oak attempts to diversify risks that arise from position sizes, geography, ratings, duration, deal structure and collateral values. Angel Oak will also seek to invest in securities that have relatively low volatility. Angel Oak seeks to limit risk of principal by targeting assets that it considers undervalued. From time to time, the Fund may allocate its assets so as to focus on particular types of securities.

The Fund is not a money market fund and does not seek to maintain a stable net asset value of \$1.00 per share.

The Fund may engage in active and frequent trading of its portfolio securities.

PRINCIPAL INVESTMENT RISKS

An investment in the Fund involves risk, including those described below. *There is no assurance that the Fund will achieve its investment objective.* An investor may lose money by investing in the Fund. An investment in the Fund is not a bank deposit and is not insured or guaranteed by the FDIC or any government agency. More complete risk descriptions are set forth below under the heading "*Additional Information About the Funds' Principal Investment Risks.*"

Debt Securities Risks.

- *Credit Risk.* The financial condition of an issuer of a debt security or other instrument may cause such issuer to default, become unable to pay interest or principal due or otherwise fail to honor its obligations or cause such issuer to be perceived (whether by market participants, rating agencies, pricing services or otherwise) as being in such situations. The value of an investment in the Fund may change quickly and without warning in response to issuer defaults, changes in the credit ratings of the Fund's portfolio investments and/or perceptions related thereto.
- *Interest Rate Risk.* Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Interest rate changes can be sudden and unpredictable, and the Fund may lose money as a result of movements in interest rates. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates.
- *Prepayment Risk.* The risk that the issuer of a debt security repays all or a portion of the principal prior to the security's maturity. In times of declining interest rates, there is a greater likelihood that the Fund's higher yielding securities will be pre-paid with the Fund being unable to reinvest the proceeds in an investment with as favorable a yield. Prepayments can therefore result in lower yields to shareholders of the Fund.
- *Extension Risk.* An issuer could exercise its right to pay principal on an obligation held by the Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates.

Under these circumstances, the value of the obligation will decrease, and the Fund will also suffer from the inability to reinvest in higher yielding securities.

- *Issuer-Specific Changes.* Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security's or instrument's credit quality or value. Entities providing credit support or a maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.

Mortgage-Backed and Asset Backed Securities Risk. Mortgage-backed and asset-backed securities represent interests in "pools" of mortgages or other assets, including consumer loans or receivables held in trust. Mortgage-backed securities are subject to "prepayment risk" (the risk that borrowers will repay a loan more quickly in periods of falling interest rates) and "extension risk" (the risk that borrowers will repay a loan more slowly in periods of rising interest rates). If the Fund invests in mortgage-backed or asset-backed securities that are subordinated to other interests in the same pool, the Fund may only receive payments after the pool's obligations to other investors have been satisfied. An unexpectedly high rate of defaults on the assets held by a pool may limit substantially the pool's ability to make payments of principal or interest to the Fund, reducing the values of those securities or in some cases rendering them worthless. The Fund's investments in other asset-backed securities are subject to risks similar to those associated with mortgage-backed securities, as well as additional risks associated with the nature of the assets and the servicing of those assets.

To-Be-Announced ("TBA") Transactions Risk. TBA purchase commitments involve a risk of loss if the value of the securities to be purchased declines prior to settlement date or if the counterparty may not deliver the securities as promised. Selling a TBA involves a risk of loss if the value of the securities to be sold goes up prior to settlement date. TBA transactions involve counterparty risk. Default or bankruptcy of a counterparty to a TBA transaction would expose the Fund to potential loss and could affect the Fund's returns.

Dollar Roll Transaction Risk. The Fund may enter into dollar roll transactions, in which the Fund sells a mortgage-backed or other security for settlement on one date and buys back a substantially similar security for settlement at a later date. Dollar rolls involve a risk of loss if the market value of the securities that the Fund is committed to buy declines below the price of the securities the Fund has sold.

Derivatives Risk. The risk of investing in derivative instruments (such as futures, swaps and structured securities), including leverage, liquidity, interest rate, market, credit and management risks, and valuation complexity. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and the Fund could lose more than the initial amount invested. The Fund's use of derivatives may result in losses to the Fund, a reduction in the Fund's returns and/or increased volatility.

Over the counter ("OTC") derivatives are also subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally-cleared derivative transactions might not be available for OTC derivatives. The primary credit risk on derivatives that are exchange-traded or traded through a central clearing counterparty resides with the Fund's clearing broker or the clearinghouse. Changes in regulation relating to a fund's use of derivatives and related instruments could potentially limit or impact the Fund's ability to invest in derivatives, limit the Fund's ability to employ certain strategies that use derivatives and/or adversely affect the value of derivatives and the Fund's performance.

Structured Products Risk. The Fund may invest in Structured Products, including CLOs, CDOs, CMOs, and other asset-backed securities and debt securitizations. Some Structured Products have credit ratings but are typically issued in various classes with various priorities. Normally, Structured Products are privately offered and sold (that is, they are not registered under the securities laws), which means less information about the security may be available as compared to publicly offered securities and only certain institutions may buy and sell them. As a result, investments in Structured Products may be characterized by the Fund as illiquid securities. An active dealer market may exist for Structured Products that qualify for Rule 144A transactions, but there can be no assurance that such a market will exist or will be active enough for the Fund to sell such securities. In addition to the typical risks associated with fixed-income securities and asset-backed securities, CLOs and CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to

make interest or other payments; (ii) the risk that the collateral may default, decline in value or quality or be downgraded by a rating agency; (iii) the Fund may invest in tranches of Structured Products that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; (v) risk of forced “fire sale” liquidation due to technical defaults such as coverage test failures; and (vi) the Structured Product’s manager may perform poorly. The senior and junior tranches of Structured Products may have floating or variable interest rates based on SOFR or other benchmark interest rate. The Fund may also invest in the equity tranches of a Structured Product, which typically represent the first loss position in the Structured Product, are unrated and are subject to higher risks. Equity tranches of Structured Products typically do not have a fixed coupon and payments on equity tranches will be based on the income received from the underlying collateral and the payments made to the senior tranches, both of which may be based on floating rates based on SOFR.

Unrated Securities Risks. Unrated securities may be less liquid than comparable rated securities and involve the risk that Angel Oak may not accurately evaluate the security’s comparative credit rating.

Hedging Risk. A hedge is an investment made in order to reduce the risk of adverse price movements in a security, (including currencies), by taking an offsetting position in a related instrument or basket of instrument (often a derivative, such as an option or a short sale). While hedging strategies can be very useful and inexpensive ways of reducing risk, they are sometimes ineffective due to unexpected changes in the market. Hedging also involves the risk that changes in the value of the related instrument or basket of securities will not match those of the instruments being hedged as expected, in which case any losses on the instruments being hedged may not be reduced.

High-Yield Debt Securities (Junk Bonds) Risk. High-yield securities (also known as “junk bonds”) carry a greater degree of risk and are considered speculative by the major credit rating agencies. High-yield securities may be issued by companies that are restructuring, are smaller and less creditworthy, or are more highly indebted than other companies. This means that they may have more difficulty making scheduled payments of principal and interest. Changes in the value of high-yield securities are influenced more by changes in the financial and business position of the issuing company than by changes in interest rates when compared to investment grade securities. High-yield securities have greater volatility because there is less certainty that principal and interest payments will be made as scheduled. The Fund’s investments in high-yield securities expose it to a substantial degree of credit risk. These investments are considered speculative under traditional investment standards. Prices of high-yield securities will rise and fall primarily in response to actual or perceived changes in the issuer’s financial health, although changes in market interest rates also will affect prices. High-yield securities may experience reduced liquidity and sudden and substantial decreases in price.

Defaulted Securities Risk. Investments in defaulted securities and obligations of distressed issuers, including securities that are, or may be, involved in reorganizations or other financial restructurings, either out of court or in bankruptcy, involve substantial risks in addition to the risks of investing in high-yield debt securities. The Fund’s share price may decline if the reorganization or restructuring is not completed as anticipated. The Fund will generally not receive interest payments on the distressed securities and may incur costs to protect its investment. Repayment of defaulted securities and obligations of distressed issuers is subject to significant uncertainties. The Fund could lose its entire investment in such securities.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. Therefore, you may lose money by investing in the Fund. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security, such as geopolitical events and environmental disasters. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

U.S. Government Securities Risk. The Fund may invest in U.S. Treasury obligations and securities issued or guaranteed by the U.S. Treasury. U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding that these securities are backed by the full faith

and credit of the United States, circumstances could arise that would prevent the payment of interest or principal. This would result in losses to the Fund.

Management Risk. The Fund is actively managed and the Sub-Advisers' ability to choose suitable investments and implement the strategies described above has a significant impact on the ability of the Fund to achieve its investment objectives. In addition, there is the risk that the investment process, techniques and analyses used by the Sub-Advisers will not produce the desired investment results and the Fund may lose value as a result.

Foreign Fixed-Income Investment Risk. Investments in fixed-income securities of non-U.S. issuers are subject to the same risks as other debt securities, notably credit risk, market risk, interest rate risk and liquidity risk, while also facing risks beyond those associated with investments in U.S. securities. For example, foreign securities may have relatively low market liquidity, greater market volatility, decreased publicly available information, and less reliable financial information about issuers, and inconsistent and potentially less stringent accounting, auditing and financial reporting requirements and standards of practice, including recordkeeping standards, comparable to those applicable to domestic issuers. Foreign securities also are subject to the risks of expropriation, nationalization, political instability or other adverse political or economic developments and the difficulty of enforcing obligations in other countries. Investments in foreign securities also may be subject to dividend withholding or confiscatory taxes, currency blockage and/or transfer restrictions and higher transactional costs.

Repurchase Agreement Risk. Repurchase agreements typically involve the acquisition by the Fund of fixed-income securities from a selling financial institution such as a bank or broker-dealer. The Fund may incur a loss if the other party to a repurchase agreement is unwilling or unable to fulfill its contractual obligations to repurchase the underlying security.

Reverse Repurchase Agreement Risk. A reverse repurchase agreement is the sale by the Fund of a debt obligation to a party for a specified price, with the simultaneous agreement by the Fund to repurchase that debt obligation from that party on a future date at a higher price. Similar to borrowing, reverse repurchase agreements provide the Fund with cash for investment purposes, which creates leverage and subjects the Fund to the risks of leverage. Reverse repurchase agreements also involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if it is unable to recover the securities and/or if the value of collateral held by the Fund, including the value of the investments made with cash collateral, is less than the value of securities.

Variable and Floating Rate Securities Risk. Floating or variable rate securities pay interest at rates that adjust in response to changes in a specified interest rate or reset at predetermined dates (such as the end of a calendar quarter). Securities with floating or variable interest rates are generally less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When a Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the NAV of the Fund's shares.

Liquidity Risk. Liquidity risk exists when particular investments are difficult to purchase or sell. Markets may become illiquid when, for example, there are few, if any, interested buyers or sellers or when dealers are unwilling or unable to make a market for particular securities. As a general matter, dealers recently have been less willing to make markets for fixed income securities. The Fund's investments in illiquid securities may reduce the return of the Fund because it may be unable to sell the illiquid securities at an advantageous time or price. Investments in foreign securities, derivatives (*e.g.*, options on securities, securities indexes, and foreign currencies) and securities with substantial market or credit risk tend to have the greatest exposure to liquidity risk. Illiquid securities may also be difficult to value.

Borrowing and Leverage Risk. Borrowing for investment purposes or utilizing derivatives creates leverage, which will exaggerate the effect of any change in the value of securities in the Fund's portfolio on the Fund's net asset value and, therefore, may increase the volatility of the Fund. Money borrowed will be subject to interest and other costs (including commitment fees and/or the cost of maintaining minimum average balances). Unless the income and capital appreciation, if any, on securities acquired with borrowed funds exceed the cost of borrowing, the use of leverage will diminish the investment performance of the Fund.

Illiquid Investments Risks. The Fund may, at times, hold illiquid investments, by virtue of the absence of a readily available market for certain of its investments, or because of legal or contractual restrictions on sales. The Fund could lose money if it is unable to dispose of an investment at a time or price that is most beneficial to the Fund.

Rating Agencies Risk. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. In addition, rating agencies are subject to an inherent conflict of interest because they are often compensated by the same issuers whose securities they grade.

Concentration in Mortgage Loans, RMBS and CMBS Risk. The Fund's assets will be concentrated in mortgage loans, RMBS (agency and non-agency) and CMBS, potentially exposing the Fund to greater risks than companies that invest in multiple sectors. The risks of concentrating in mortgage loans, RMBS (agency and non-agency) and CMBS include susceptibility to changes in interest rates and the risks associated with the market's perception of issuers, the creditworthiness of the parties involved and investing in real estate securities.

ETF Risks.

- *Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.* The Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- *Premium-Discount Risk.* The Shares may trade above or below their net asset value ("NAV"). The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the New York Stock Exchange (the "Exchange") or other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading activity in Shares. In addition, you may incur the cost of the "spread," that is, any difference between the bid price and the ask price of the Shares.
- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if the Fund's Shares have more trading volume and market liquidity and higher if the Fund's Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be less liquid than Shares, potentially causing the market price of Shares to deviate from its NAV. The spread varies over time for Shares of the Fund based on the Fund's trading volume and market liquidity and is generally lower if the Fund has high trading volume and market liquidity, and higher if the Fund has little trading volume and market liquidity.

Cash Creation Unit Risk. Unlike most other ETFs, the Fund expects to effect a substantial portion of its creations and redemptions for cash, rather than in-kind securities (although redemptions will also be done in-kind under certain circumstances). The use of cash creations and redemptions may also cause the Fund's shares to trade in the market at greater bid-ask spreads or greater premiums or discounts to the Fund's NAV. As a practical matter, only institutions and large investors, such as market makers or other large broker dealers, also known as "authorized participants," create or redeem shares directly through the Fund. Most investors will buy and sell shares of the Fund on an exchange through a broker-dealer. Cash creation and redemption transactions may result in certain brokerage,

tax, execution, price movement and other costs and expenses related to the execution of trades resulting from such transactions. To offset these expenses, the Fund will collect fees from the applicable authorized participant to reimburse the Fund for any costs incurred by the Fund that result from a cash creation or redemption. The use of cash for redemptions will limit the tax efficiency of the Fund.

Real Estate Sector Risk. The risk that real estate-related investments may decline in value as a result of factors affecting the real estate sector, such as the supply of real property in certain markets, changes in zoning laws, delays in completion of construction, changes in real estate values, changes in property taxes, levels of occupancy, and local, regional, and general market conditions.

Large Shareholder and Large-Scale Redemption Risk. Certain shareholders, including an Authorized Participant, a third-party investor, a market maker, or another entity, may from time to time own or manage a substantial amount of Fund shares, or may invest in the Fund and hold its investment for a limited period of time. There can be no assurance that any large shareholder or large group of shareholders would not redeem their investment. Redemptions of a large number of Fund shares could require the Fund to dispose of assets to meet the redemption requests, which can accelerate the realization of taxable income and/or capital gains and cause the Fund to make taxable distributions to its shareholders earlier than the Fund otherwise would have. In addition, under certain circumstances, non-redeeming shareholders may be treated as receiving a disproportionately large taxable distribution during or with respect to such year.

Underlying Fund Risk. Because the Fund may invest in other investment companies, including but not limited to BDCs and ETFs (collectively, “Underlying Funds”), the Fund’s investment performance may depend on the investment performance of the Underlying Funds. An investment in the Fund is subject to the risks associated with the Underlying Funds in which the Fund invests. The Fund will indirectly pay a proportional share of the expenses of Underlying Funds in which it invests (which may include operating expenses and management fees). Some Underlying Funds may not produce qualifying income for purposes of the “Income Requirement,” which must be met in order for each Fund to maintain its status as a regulated investment company under the Internal Revenue Code of 1986, as amended (the “Code”). If one or more Underlying Funds generates more non-qualifying income for purposes of the “Income Requirement” than the Fund’s portfolio management expects, it could cause the Fund to inadvertently fail the “Income Requirement” thereby causing the Fund to inadvertently fail to qualify as a regulated investment company under the Code.

High Portfolio Turnover Risk. The Fund’s investment strategy may from time-to-time result in higher turnover rates. This may negatively impact the performance of the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

New Fund Risk. The Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have limited track record or history on which to base their investment decision. There can be no assurance that the Fund will grow to or maintain an economically viable size.

Non-Diversification Risk. Because the Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of the Fund’s Shares and greater risk of loss.

PERFORMANCE

Performance information is not provided below because the Fund has not yet been in operation for a full calendar year. When provided, the information will provide some indication of the risks of investing in the Fund by showing how the Fund’s average annual returns compare with a broad measure of market performance. Past performance does not necessarily indicate how the Fund will perform in the future. Performance information is available on the Fund’s website at www.strivefunds.com or by calling the Fund at (215) 330-4476.

INVESTMENT ADVISER AND INVESTMENT SUB-ADVISERS

Investment Adviser: Empowered Funds, LLC dba EA Advisers (the “Adviser”)
Investment Sub-Advisers: Strive Asset Management, LLC (“Strive”)
Angel Oak Capital Advisors, LLC (“Angel Oak”)

PORTFOLIO MANAGERS

Matthew Cole, Chief Executive Officer and Chief Investment Officer of Strive and Jeffrey Sherman a Portfolio Manager of Strive, are each a co-Portfolio Manager of the Fund and have been primarily responsible for the day-to-day management of the Fund’s sector allocations and duration target of the Fund since its inception (August 2023).

Clayton Triick, Senior Portfolio Manager and Ward Bortz, ETF Portfolio Manager of Angel Oak each have been primarily responsible for the day-to-day management of the security selection of the Fund since its inception (August 2023).

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares on a continuous basis only in large blocks of Shares known as “Creation Units,” and only APs (typically, broker-dealers) may purchase or redeem Creation Units. Creation Units generally are issued and redeemed ‘in-kind’ for securities and partially in cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Once created, individual Shares generally trade in the secondary market at market prices that change throughout the day. Market prices of Shares may be greater or less than their NAV. **Except when aggregated in Creation Units, the Fund’s shares are not redeemable securities.**

TAX INFORMATION

The Fund’s distributions generally are taxable to you as ordinary income, capital gain, or some combination of both, unless your investment is made through an Individual Retirement Account (“IRA”) or other tax-advantaged account. However, subsequent withdrawals from such a tax-advantaged account may be subject to U.S. federal income tax. You should consult your own tax advisor about your specific tax situation.

PURCHASES THROUGH BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary, the Fund and its related companies may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend Shares over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT THE FUNDS

How are the Funds Different From Mutual Funds?

Redeemability. Mutual fund shares may be bought from, and redeemed with, the issuing fund for cash at NAV typically calculated once at the end of the business day. Shares, by contrast, cannot be purchased from or redeemed with the Funds except by or through APs (typically, broker-dealers), and then principally for an in-kind basket of securities (and a limited cash amount). In addition, each Fund issues and redeems Shares on a continuous basis only in large blocks of Shares, called “Creation Units.”

Exchange Listing. Unlike mutual fund shares, Shares of each Fund are listed for trading on the Exchange. Investors can purchase and sell Shares on the secondary market through a broker. Investors purchasing Shares in the secondary market through a brokerage account or with the assistance of a broker may be subject to brokerage commissions and charges. Secondary-market transactions do not occur at NAV, but at market prices that change throughout the day, based on the supply of, and demand for, Shares and on changes in the prices of a Fund’s portfolio holdings. The market price of Shares may differ from the NAV of a Fund. The difference between market price of Shares and the NAV of a Fund is called a premium when the market price is above the reported NAV and called a discount when the market price is below the reported NAV, and the difference is expected to be small most of the time, though it may be significant, especially in times of extreme market volatility.

Transparency. Each Fund’s portfolio holdings are disclosed on its website daily after the close of trading on the Exchange and prior to the opening of trading on the Exchange the following day. A description of the Funds’ policies and procedures with respect to the disclosure of the Funds’ portfolio holdings is available in the Funds’ Statement of Additional Information (“SAI”).

Premium/Discount Information. Information about the premiums and discounts at which the Funds’ Shares have traded is available at www.strivefunds.com.

ADDITIONAL INFORMATION ABOUT THE FUNDS’ INVESTMENT OBJECTIVE AND PRINCIPAL INVESTMENT STRATEGIES

Each Fund’s investment objective is a non-fundamental investment policy and may be changed without a vote of shareholders upon prior written notice to shareholders.

Total Return Bond ETF

The Fund is an actively managed ETF that under normal conditions, invests at least 80% of its net assets (plus borrowings for investment purposes) in a portfolio of bonds of varying maturities. The Fund’s 80% investment policy is non-fundamental and may be changed upon 60 days’ notice to shareholders.

For purposes of this 80% Policy, the Fund will invest in a wide range of “bonds,” including agency and non-agency RMBS, CMBS, CLOs, CDOs, CMOs, CBOs, ABS, including Structured Products, Loans, corporate debt, including bank-issued subordinated debt (which includes subordinated debt issued by community banks), municipal securities, U.S. Treasury and U.S. government agency securities and derivative instruments that invest substantially all of their assets in, are linked to, or otherwise provide investment exposure to, bonds.

The Fund will concentrate its investments in Mortgage Related Instruments. This means that, under normal circumstances, the Fund will invest more than 25% of its assets in Mortgage Related Instruments (measured at the time of purchase). The Fund will not concentrate its investments in any other group of industries. The Fund’s policy to concentrate its investments in Mortgage Related Instruments is fundamental and may not be changed without shareholder approval.

The Fund may invest, without limitation, in bonds of any quality and maturity. The fixed income instruments in which the Fund invests may include those of issuers from the United States and other countries, without limitation. The Fund’s investments in foreign debt securities will typically be denominated in U.S. dollars.

The Fund’s average portfolio duration is expected to vary from two to nine years. Duration is a measure of the Fund’s price sensitivity to changes in yields or interest rates. Duration incorporates a security’s yield, coupon, final maturity, call and put features, and prepayment exposure into one measure with a higher duration indicating greater sensitivity to interest rates.

The Fund may invest up to 30% of its assets in junk bonds. High yield securities will be rated BB+ or lower by S&P or will be of an equivalent quality rating from another Nationally Recognized Statistical Ratings Organization. If a bond is unrated, Angel Oak may determine whether it is of comparable quality and therefore eligible for the Fund's investment.

The Fund may invest up to 15% of its net assets in investments that are deemed to be illiquid, which may include private placements, certain Rule 144A securities (which are subject to resale restrictions), and securities of issuers that are bankrupt or in default.

The Fund may invest in other investment companies, including closed-end investment companies and open-end investment companies, which may operate as traditional mutual funds, ETFs or BDCs.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

In pursuing its investment objective or for hedging purposes, the Fund may utilize borrowing and may also invest, without limitation, in derivatives instruments such as options, futures contracts, or swap agreements or in mortgage-backed securities (TBAs). These derivatives may be traded over the counter or on an exchange and may be used for speculative purposes, currency hedging, duration management or to pursue the Fund's investment objective. The Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Fund may borrow up to one-third of its total assets. The Fund may also invest in repurchase agreements and borrow through reverse repurchase agreements.

Strive Enhanced Income Short Maturity ETF

The Fund is an actively-managed ETF that, using an enhanced cash strategy, seeks to achieve its investment objective, under normal circumstances, by investing at least 80% of its net assets (plus borrowings for investment purposes) in U.S.-dollar denominated investment-grade fixed- and floating-rate bonds, and debt securities. Under normal circumstances, the Fund seeks to maintain a dollar-weighted average maturity of less than two years and a dollar-weighted average duration of less than one year.

The Fund may invest in securities of any duration or maturity. Maturity refers to the length of time until a debt security's principal is repaid with interest. Duration is a measure of the Fund's price sensitivity to changes in yields or interest rates. Duration incorporates a security's yield, coupon, final maturity, call and put features, and prepayment exposure into one measure with a higher duration indicating greater sensitivity to interest rates.

The Fund invests primarily in agency and non-agency RMBS, ABS, CLOs, CDOs, CMOs, and other Structured Products; corporate debt and other debt securities; and U.S. Treasury and U.S. government agency securities. The Fund may invest up to 25% of its net assets in CLOs.

The Fund may invest in other investment companies, including closed-end investment companies and open-end investment companies, which may operate as traditional mutual funds, ETFs or BDCs.

The Fund will concentrate its investments in Mortgage Related Instruments. This means that, under normal circumstances, the Fund will invest more than 25% of its assets in Mortgage Related Instruments (measured at the time of purchase). The Fund will not concentrate its investments in any other group of industries. The Fund's policy to concentrate its investments in Mortgage Related Instruments is fundamental and may not be changed without shareholder approval.

The fixed income instruments in which the Fund invests may include those of issuers from the United States and other countries. The Fund's investments in foreign debt securities will typically be denominated in U.S. dollars.

The Fund may invest up to 15% of its net assets in investments that are deemed to be illiquid, which may include private placements, certain Rule 144A securities (which are subject to resale restrictions), and securities of issuers that are bankrupt or in default.

The Fund is considered to be non-diversified, which means that it may invest more of its assets in the securities of a single issuer or a smaller number of issuers than if it were a diversified fund.

The Fund may invest in high-yield securities and securities that are not rated by any rating agencies. These "high-yield" securities (also known as "junk bonds") will generally be rated BB+ or lower by S&P or will be of equivalent

quality rating from another Nationally Recognized Statistical Ratings Organization. If a bond is unrated, the Angel Oak may determine whether it is of comparable quality and therefore eligible for the Fund's investment. Although the Fund will not acquire investments of issuers that are in default at the time of investment, the Fund may hold such securities if an investment subsequently defaults.

In pursuing its investment objective or for hedging purposes, the Fund may utilize borrowing, and various types of derivative instruments, including Structured Products, swaps, futures contracts, and options, although the Sub-Advisers expect that not all such derivatives will be used at all times. Such derivatives may trade over the counter or on an exchange and may principally be used for one or more of the following purposes: speculation, currency hedging, duration management, or to pursue the Fund's investment objective. The Fund may borrow to the maximum extent permitted by applicable law, which generally means that the Fund may borrow up to one-third of its total assets. The Fund may also invest in reverse repurchase agreements.

The Fund is not a money market fund and does not seek to maintain a stable net asset value of \$1.00 per share.

The Fund may engage in active and frequent trading of its portfolio securities.

Temporary Defensive Positions

From time to time, each Fund may take temporary defensive positions that are inconsistent with its principal investment strategies, in attempting to respond to adverse market, economic, political or other conditions. In such instances, a Fund may hold up to 100% of its assets in cash; short-term U.S. government securities and government agency securities; investment grade money market instruments; investment grade fixed-income securities; repurchase agreements; commercial paper and cash equivalents. Each Fund may invest in the securities described above at any time to maintain liquidity, pending selection of investments by the Sub-Advisers, or if the Sub-Advisers believe that sufficient investment opportunities that meet the Fund's investment criteria are not available. By keeping cash on hand, a Fund may be able to meet shareholder redemptions without selling securities and realizing gains and losses. As a result of engaging in these temporary measures, the applicable Fund may not achieve its investment objective.

ADDITIONAL INFORMATION ABOUT THE FUNDS' PRINCIPAL INVESTMENT RISKS

The following information is in addition to, and should be read along with, the description of each Fund's principal investment risks in the sections titled "Fund Summary—Principal Investment Risks" above. A risk applies to each Fund unless noted otherwise.

Borrowing and Leverage Risk. Certain transactions may give rise to a form of leverage. Such transactions may include, among others, reverse repurchase agreements, loans of portfolio securities, and the use of when-issued, delayed delivery or forward commitment transactions. A Fund's use of derivatives may also create leveraging risk. The Fund also may be exposed to leveraging risk by borrowing money for investment purposes. Leverage may cause a Fund to liquidate portfolio positions to satisfy its obligations when it may not be advantageous to do so. Leverage, including borrowing, may cause a Fund to be more volatile than if a Fund had not been leveraged. This is because leverage tends to exaggerate the effect of any increase or decrease in the value of a Fund's portfolio securities. Certain types of leveraging transactions, such as short sales that are not "against the box," (*i.e.*, short sales where the Fund does not hold the security or have the right to acquire it without payment of further consideration), could theoretically be subject to unlimited losses in cases where a Fund, for any reason, is unable to close out the transaction. In addition, to the extent a Fund borrows money, interest costs on such borrowings may not be recovered by any appreciation of the securities purchased with the borrowed amounts and could exceed a Fund's investment returns, resulting in greater losses. Moreover, to make payments of interest and other loan costs, a Fund may be forced to sell portfolio securities when it is not otherwise advantageous to do so.

Cash Creation Unit Risk. Unlike most other ETFs, each Fund expects to effect a substantial portion of its creations and redemptions for cash, rather than in-kind securities (although redemptions will also be done in-kind under certain circumstances). The use of cash creations and redemptions may also cause a Fund's shares to trade in the market at greater bid-ask spreads or greater premiums or discounts to a Fund's NAV. As a practical matter, only institutions and large investors, such as market makers or other large broker dealers, also known as "authorized participants," create or redeem shares directly through a Fund. Most investors will buy and sell shares of a Fund on an exchange through a broker-dealer. Cash creation and redemption transactions may result in certain brokerage, tax,

execution, price movement and other costs and expenses related to the execution of trades resulting from such transactions. To offset these expenses, a Fund will collect fees from the applicable authorized participant to reimburse a Fund for any costs incurred by a Fund that result from a cash creation or redemption. The use of cash for redemptions will limit the tax efficiency of a Fund.

Concentration in Mortgage Loans, RMBS and CMBS Risk. Each Fund's assets will be concentrated in mortgage loans, RMBS (agency and non-agency) and CMBS, potentially exposing a Fund to greater risks than companies that invest in multiple sectors. The risks of concentrating in mortgage loans, RMBS (agency and non-agency) and CMBS include susceptibility to changes in interest rates and the risks associated with the market's perception of issuers, the creditworthiness of the parties involved and investing in real estate securities.

Currency Risk. Each Fund may invest directly in non-U.S. currencies or in securities that trade in, and receive revenues in, non-U.S. currencies and will be subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedging positions, that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates in foreign (non-U.S.) countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, rates of inflation, balance of payments and governmental surpluses or deficits, intervention (or the failure to intervene) by U.S. or foreign (non-U.S.) governments, central banks or supranational entities such as the International Monetary Fund, or by the imposition of currency controls or other political developments in the United States or abroad. As a result, a Fund's investments in foreign currency-denominated securities may reduce the returns of a Fund. Currency risk may be particularly high to the extent that a Fund invests in non-U.S. currencies or engages in foreign currency transactions that are economically tied to emerging market countries. These currency transactions may present market, credit, currency, liquidity, legal, political and other risks different from, or greater than, the risks of investing in developed foreign (non-U.S.) currencies or engaging in foreign currency transactions that are economically tied to developed foreign countries.

Debt Securities Risk. Each Fund may invest in debt obligations, which are subject to one or more of the following risks:

- *Credit Risk.* Bonds are subject to varying degrees of credit risk, which are often reflected in credit ratings. The value of an issuer's securities held by the Fund may decline in response to adverse developments with respect to the issuer. In addition, a Fund could lose money if the issuer or guarantor of a bond is unable or unwilling to make timely principal and interest payments or to otherwise honor its obligations. There is also risk that securities will be subsequently downgraded should rating agencies believe the issuer's business outlook or creditworthiness has deteriorated. If this occurs, the values of these investments may decline, or it may affect the issuer's ability to raise additional capital for operational or financial purposes and increase the chance of default, as a downgrade may be seen in the financial markets as a signal of an issuer's deteriorating financial position.
- *Interest Rate Risk.* Interest rate risk is the risk that fixed income securities will decline in value because of changes in interest rates. Fixed income securities with longer durations tend to be more sensitive to changes in interest rates, usually making them more volatile than securities with shorter durations. Interest rate changes can be sudden and unpredictable, and a Fund may lose money as a result of movements in interest rates. Recent and potential future changes in monetary policy made by central banks or governments are likely to affect the level of interest rates.
- *Extension Risk.* An issuer could exercise its right to pay principal on an obligation held by a Fund (such as a mortgage-backed security) later than expected. This may happen when there is a rise in interest rates. Under these circumstances, the value of the obligation will decrease, and a Fund will also suffer from the inability to reinvest in higher yielding securities.
- *Prepayment.* Many types of debt securities, including mortgage securities, are subject to prepayment risk. Prepayment risk occurs when the issuer of a security can repay principal prior to the security's maturity. Securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a debt security can be difficult to predict and result in greater volatility.

- *Issuer-Specific Changes.* Changes in the financial condition of an issuer or counterparty, changes in specific economic or political conditions that affect a particular type of security or issuer, and changes in general economic or political conditions can increase the risk of default by an issuer or counterparty, which can affect a security's or instrument's credit quality or value. Entities providing credit support or a maturity-shortening structure also can be affected by these types of changes, and if the structure of a security fails to function as intended, the security could decline in value.

Defaulted Securities Risk. Defaulted bonds are subject to greater risk of loss of income and principal than higher rated securities and are considered speculative. In the event of a default, a Fund may incur additional expenses to seek recovery. The repayment of defaulted bonds is subject to significant uncertainties, and, in some cases, there may be no recovery of repayment. Further, defaulted bonds might be repaid only after lengthy workout or bankruptcy proceedings, during which the issuer might not make any interest or other payments. Workout or bankruptcy proceedings typically result in only partial recovery of cash payments or an exchange of the defaulted bond for other securities of the issuer or its affiliates. Often, the securities received are illiquid or speculative. Investments in securities following a workout or bankruptcy proceeding typically entail a higher degree of risk than investments in securities that have not recently undergone a reorganization or restructuring. Moreover, these securities can be subject to heavy selling or downward pricing pressure after the completion of a workout or bankruptcy proceeding. If a Fund's evaluation of the anticipated outcome of an investment should prove inaccurate, a Fund could experience a loss. Such securities obtained in exchange may include, but are not limited to, equity securities, warrants, rights, participation interests in sales of assets, and contingent interest obligations.

A Fund may hold securities of issuers that are, or are about to be, involved in reorganizations, financial restructurings, or bankruptcy (also known as "distressed debt"). Defaulted bonds and distressed debt securities are speculative and involve substantial risks in addition to the risks of investing in junk bonds. To the extent that a Fund holds distressed debt, the Fund will be subject to the risk that it may lose a portion or all of its investment in the distressed debt and may incur higher expenses trying to protect its interests in distressed debt. The prices of distressed bonds are likely to be more sensitive to adverse economic changes or individual issuer developments than the prices of higher rated securities. During an economic downturn or substantial period of rising interest rates, distressed security issuers may experience financial stress that would adversely affect their ability to service their principal and interest payment obligations, to meet their projected business goals, or to obtain additional financing. In addition, any distressed securities or any securities received in exchange for such securities may be subject to restrictions on resale. In any reorganization or liquidation proceeding, a Fund may lose its entire investment or may be required to accept cash or securities with a value less than its original investment. Moreover, it is unlikely that a liquid market will exist for a Fund to sell its holdings in distressed debt securities.

Derivatives Risk. Derivative investments have risks, including the imperfect correlation between the value of the instruments and the underlying assets or index; the loss of principal, including the potential loss of amounts greater than the initial amount invested in the derivative instrument; the possible default of the other party to the transaction; and illiquidity of the derivative investments. The derivatives used by a Fund may give rise to a form of leverage. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may also increase expenses and increase the impact of a Fund's other risks. The use of leverage may cause a Fund to liquidate portfolio positions to satisfy its obligations or to meet regulatory requirements when it may not be advantageous to liquidate the positions, resulting in increased volatility of returns. Certain of a Fund's transactions in derivatives could also affect the amount, timing, and character of distributions to shareholders, which may result in the Fund realizing more short-term capital gain and ordinary income subject to tax at ordinary income tax rates than it would if it did not engage in the transactions, which may adversely impact the Fund's after-tax returns.

Over-the-counter ("OTC") derivatives or other similar investments are also subject to the risk that a counterparty to the transaction will not fulfill its contractual obligations to the other party, as many of the protections afforded to centrally-cleared derivative transactions might not be available for OTC derivatives or other similar investments. The primary credit risk on derivatives or other similar investments that are exchange-traded or traded through a central clearing counterparty resides with a Fund's clearing broker or the clearinghouse. Changes in regulation relating to a registered fund's use of derivatives and related instruments could potentially limit or impact a Fund's ability to invest in derivatives, limit a Fund's ability to employ certain strategies that use derivatives or other similar investments and/or adversely affect the value of derivatives or other similar investments and a Fund's performance.

Options Risk. Options or options on futures contracts give the holder of the option the right to buy (or to sell) a position in a security or in a contract to the writer of the option, at a certain price. They are subject to correlation risk because there may be an imperfect correlation between the options and the securities markets that cause a given transaction to fail to achieve its objectives. The successful use of options depends on the Sub-Advisers' ability to predict correctly future price fluctuations and the degree of correlation between the options and securities markets. Exchanges can limit the number of positions that can be held or controlled by a Fund or the Sub-Adviser, thus limiting the ability to implement a Fund's strategies. Options are also particularly subject to leverage risk and can be subject to liquidity risk.

Swap Agreements Risk. Swap agreements are contracts among a Fund and a counterparty to exchange the return of the pre-determined underlying investment (such as the rate of return of a specified index). Swap agreements may be negotiated bilaterally and traded OTC between two parties or, in some instances, must be transacted through a futures commission merchant and cleared through a clearinghouse that serves as a central counterparty. Risks associated with the use of swap agreements are different from those associated with ordinary portfolio securities transactions, due in part to the fact they could be considered illiquid and many swaps trade on the OTC market. Swaps are particularly subject to counterparty credit, correlation, valuation, liquidity and leveraging risks. Certain standardized swaps are subject to mandatory central clearing. Central clearing is intended to reduce counterparty credit risk and increase liquidity, but central clearing does not make swap transactions risk-free.

Futures Contracts Risk. Futures contracts are typically exchange-traded contracts that call for the future delivery of an asset at a certain price and date, or cash settlement (payment of the gain or loss on the contract). Futures are often used to manage or hedge risk because they enable the investor to buy or sell an asset in the future at an agreed-upon price and for other reasons such as to manage exposure to changes in interest rates and bond prices; as an efficient means of adjusting overall exposure to certain markets; in an effort to enhance income; to protect the value of portfolio securities; and to adjust portfolio duration. Risks of futures contracts may be caused by an imperfect correlation between movements in the price of the instruments and the price of the underlying securities. In addition, there is the risk that a Fund may not be able to enter into a closing transaction because of an illiquid market. Futures markets can be highly volatile and the use of futures may increase the volatility of a Fund's NAV. Exchanges can limit the number of options that can be held or controlled by the Fund or the Sub-Advisers, thus limiting the ability to implement a Fund's strategies. Futures are also subject to leveraging risk and can be subject to liquidity risk.

Dollar Roll Transaction Risk. Each Fund may enter into dollar roll transactions, in which a Fund sells a mortgage-backed or other security for settlement on one date and buys back a substantially similar security for settlement at a later date. Dollar rolls involve a risk of loss if the market value of the securities that a Fund is committed to buy declines below the price of the securities a Fund has sold.

ETF Risks.

- ***Authorized Participants, Market Makers and Liquidity Providers Concentration Risk.*** Each Fund has a limited number of financial institutions that may act as Authorized Participants ("APs"). In addition, there may be a limited number of market makers and/or liquidity providers in the marketplace. To the extent either of the following events occur, Shares may trade at a material discount to NAV and possibly face delisting: (i) APs exit the business or otherwise become unable to process creation and/or redemption orders and no other APs step forward to perform these services, or (ii) market makers and/or liquidity providers exit the business or significantly reduce their business activities and no other entities step forward to perform their functions.
- ***Premium-Discount Risk.*** The Shares may trade above or below their NAV. The NAV of a Fund will generally fluctuate with changes in the market value of a Fund's holdings. The market prices of Shares, however, will generally fluctuate in accordance with changes in NAV as well as the relative supply of, and demand for, Shares on the Exchange and other securities exchanges. The trading price of Shares may deviate significantly from NAV during periods of market volatility or limited trading in Shares. The Adviser cannot predict whether Shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the securities held by the Fund. However, given that Shares can be purchased and redeemed in large blocks of Shares,

called Creation Units (unlike shares of closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their NAV), and a Fund's portfolio holdings are fully disclosed on a daily basis, the Adviser believes that large discounts or premiums to the NAV of Shares should not be sustained, but that may not be the case.

- *Cost of Trading Risk.* Investors buying or selling Shares in the secondary market will pay brokerage commissions or other charges imposed by brokers as determined by that broker. Brokerage commissions are often a fixed amount and may be a significant proportional cost for investors seeking to buy or sell relatively small amounts of Shares. In addition, secondary market investors will also incur the cost of the difference between the price that an investor is willing to pay for Shares (the "bid" price) and the price at which an investor is willing to sell Shares (the "ask" price). This difference in bid and ask prices is often referred to as the "spread" or "bid/ask spread." The bid/ask spread varies over time for Shares based on trading volume and market liquidity, and is generally lower if Shares have more trading volume and market liquidity and higher if Shares have little trading volume and market liquidity. Further, increased market volatility may cause increased bid/ask spreads.
- *Trading Risk.* Although the Shares are listed on the Exchange, there can be no assurance that an active or liquid trading market for them will develop or be maintained. In addition, trading in Shares on the Exchange may be halted. In stressed market conditions, the liquidity of a Fund's Shares may begin to mirror the liquidity of its underlying portfolio holdings, which can be significantly less liquid than a Fund's Shares, potentially causing the market price of a Fund's Shares to deviate from its NAV.

Financial Services Sector Risk (Total Return Bond ETF Only). The risk that an investment in issuers in the financial services sector or transactions with one or more counterparties in the financial services sector may be adversely affected by, among other things: (i) changes in governmental regulation; (ii) changes in interest rates and cost of capital funds; (iii) deterioration of the credit markets; (iv) credit losses; (v) financial losses associated with investment activities, especially when financial services companies are exposed to financial leverage; (vi) the risk of substantial decline in the valuations of its assets; (vii) unexpected market or other events that lead to a sudden decline in the values of most or all companies in the financial services sector; and (viii) the interconnectedness or interdependence among financial services companies, including the risk that the financial distress or failure of one financial services company may materially and adversely affect a number of other financial services companies.

Foreign Fixed-Income Investment Risk. Investments in fixed-income securities of non-U.S. issuers are subject to the same risks as other debt securities, notably credit risk, market risk, interest rate risk and liquidity risk, while also facing risks beyond those associated with investments in U.S. securities including, among others, greater market volatility, the availability of less reliable financial information, higher transactional costs, taxation by foreign governments, decreased market liquidity and political instability. Foreign issuers are often subject to less stringent requirements regarding accounting, auditing, financial reporting and record keeping than are U.S. securities, and therefore, not all material information regarding these issuers will be available. Securities exchanges or foreign governments may adopt rules or regulations that may negatively impact a Fund's ability to invest in foreign securities or may prevent such Fund from repatriating its investments.

Hedging Risk. A hedge is an investment made in order to reduce the risk of adverse price movements in a security, (including currencies), by taking an offsetting position in a related instrument or basket of instruments (often a derivative, such as an option or a short sale). While hedging strategies can be very useful and inexpensive ways of reducing risk, they are sometimes ineffective due to unexpected changes in the market. Hedging also involves the risk that changes in the value of the related instrument or basket of securities will not match those of the instruments being hedged as expected, in which case any losses on the instruments being hedged may not be reduced. A Fund's use of hedging strategy also exposes a Fund to the risks of investing in derivative contracts (see above for more information on derivatives risks).

High Portfolio Turnover Risk (Strive Enhanced Income Short Maturity ETF Only). The Fund's investment strategy may from time-to-time result in higher turnover rates. This may negatively impact the performance of the Fund. Rapid portfolio turnover also exposes shareholders to a higher current realization of short-term capital gains, distributions of which would generally be taxed to you as ordinary income and thus cause you to pay higher taxes.

High-Yield Debt Securities (Junk Bonds) Risk. Each Fund may invest in debt securities that are rated below investment grade (*i.e.*, “junk bonds”) by nationally recognized statistical rating organizations or are unrated or stale-rated securities that the investment adviser believes are of comparable quality. Junk bonds are considered speculative with respect to their capacity to pay interest and repay principal in accordance with the terms of the obligation. While generally providing greater income and opportunity for gain, non-investment grade debt securities are subject to greater risks than higher-rated securities.

Companies that issue junk bonds are often highly leveraged and may not have more traditional methods of financing available to them. During an economic downturn or recession, highly leveraged issuers of high-yield securities may experience financial stress, and may not have sufficient revenues to meet their interest payment obligations. Economic downturns tend to disrupt the market for junk bonds, lowering their values and increasing their price volatility. The risk of issuer default is higher with respect to junk bonds because those issues may be subordinated to other creditors of the issuer.

The credit rating from a nationally recognized statistical rating organization of a junk bond does not necessarily address its market value risk, and ratings may from time to time change to reflect developments regarding the issuer’s financial condition. The lower the rating of a junk bond, the more speculative its characteristics.

A Fund may have difficulty selling some junk bonds because they may have a thin trading market. The lack of a liquid secondary market may have an adverse effect on the market price and a Fund’s ability to dispose of particular issues and may also make it more difficult for a Fund to obtain accurate market quotations in valuing these assets. In the event a Fund experiences an unexpected level of net redemptions, a Fund could be forced to sell its junk bonds at an unfavorable price. Prices of junk bonds have been found to be less sensitive to fluctuations in interest rates and more sensitive to adverse economic changes and individual corporate developments than those of higher-rated debt securities.

Illiquid Investments Risk. A Fund may invest up to 15% of its net assets in illiquid investments. A Fund may also invest in restricted securities. Investments in restricted securities could have the effect of increasing the amount of a Fund’s assets invested in illiquid investments if qualified institutional buyers are unwilling to purchase these securities.

Illiquid and restricted investments may be difficult to dispose of at a fair price at the times when a Fund believes it is desirable to do so. The market price of illiquid and restricted investments generally is more volatile than that of more liquid investments, which may adversely affect the price that a Fund pays for or recovers upon the sale of such investments. Illiquid and restricted investments are also more difficult to value, especially in challenging markets. The Adviser’s judgment may play a greater role in the valuation process. Investment of a Fund’s assets in illiquid and restricted securities may restrict the Fund’s ability to take advantage of market opportunities. To dispose of an unregistered security, a Fund, where it has contractual rights to do so, may have to cause such security to be registered. A considerable period may elapse between the time the decision is made to sell the security and the time the security is registered, thereby enabling a Fund to sell it. Contractual restrictions on the resale of securities vary in length and scope and are generally the result of a negotiation between the issuer and acquirer of the securities. In either case, a Fund would bear market risks during that period. Liquidity risk may impact a Fund’s ability to meet shareholder redemptions and as a result, the Fund may be forced to sell securities at inopportune prices.

Certain fixed-income instruments are not readily marketable and may be subject to restrictions on resale. Fixed-income instruments may not be listed on any national securities exchange and no active trading market may exist for certain of the fixed-income instruments in which a Fund will invest. Where a secondary market exists, the market for some fixed-income instruments may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods. Trade settlement periods may take longer than seven days for transactions of leveraged loans, meaning it could take the Fund significant time to receive money after selling its investments. In addition, dealer inventories of certain securities are at historic lows in relation to market size, which indicates a potential for reduced liquidity as dealers may be less able to “make markets” for certain fixed-income securities.

Certain Structured Products, including CLOs, CDOs, CMOs, CBOs, and other asset-backed securities and debt securitizations, may be thinly traded or have a limited trading market. Structured Products are typically privately offered and sold, and thus, are not registered under the securities laws, which means less information about the

security may be available as compared to publicly offered securities and only certain institutions may buy and sell them. As a result, investments in Structured Products may be characterized by a Fund as illiquid securities.

Investment Risk. When you sell your Shares, they could be worth less than what you paid for them. The Fund could lose money due to short-term market movements and over longer periods during market downturns. Securities may decline in value due to factors affecting securities markets generally or particular asset classes or industries represented in the markets. The value of a security may decline due to general market conditions, economic trends or events that are not specifically related to the issuer of the security. Geopolitical and other risks, including war, terrorism, trade disputes, political or economic dysfunction within some nations, public health crises, and environmental disasters such as earthquakes, fire, and floods, may add to instability in world economies and volatility in markets generally. Changes in trade policies and international trade agreements could affect the economies of many countries in unpredictable ways. The value of a security may also decline due to factors that affect a particular industry or group of industries. During a general downturn in the securities markets, multiple asset classes may be negatively affected. Therefore, you may lose money by investing in the Fund.

Large Shareholder and Large-Scale Redemption Risk. Certain shareholders, including an Authorized Participant, a third-party investor, a market maker, or another entity, may from time to time own or manage a substantial amount of Fund shares, or may invest in a Fund and hold its investment for a limited period of time. There can be no assurance that any large shareholder or large group of shareholders would not redeem their investment. Redemptions of a large number of Fund shares could require a Fund to dispose of assets to meet the redemption requests, which can accelerate the realization of taxable income and/or capital gains and cause a Fund to make taxable distributions to its shareholders earlier than a Fund otherwise would have. In addition, under certain circumstances, non-redeeming shareholders may be treated as receiving a disproportionately large taxable distribution during or with respect to such year.

Liquidity Risk. Liquidity risk exists when particular investments are difficult to purchase or sell. Markets may become illiquid when, for example, there are few, if any, interested buyers or sellers or when dealers are unwilling or unable to make a market for particular securities. As a general matter, dealers recently have been less willing to make markets for fixed income securities. A Fund's investments in illiquid securities may reduce the return of the Fund because it may be unable to sell the illiquid securities at an advantageous time or price. Investments in foreign securities, derivatives (*e.g.*, options on securities, securities indexes, and foreign currencies) and securities with substantial market or credit risk tend to have the greatest exposure to liquidity risk. Illiquid securities may also be difficult to value.

Management Risk. Each Fund is actively managed and the Sub-Advisers' ability to choose suitable investments and implement the strategies described above has a significant impact on the ability of a Fund to achieve its investment objectives. In addition, there is the risk that the investment process, techniques and analyses used by the Sub-Advisers will not produce the desired investment results and a Fund may lose value as a result.

Mortgage-Backed and Asset-Backed Securities Risk. The price paid by a Fund for asset-backed securities, the yield the Fund expects to receive from such securities and the average life of such securities are based on a number of factors, including the anticipated rate of prepayment of the underlying assets. The value of these securities may be significantly affected by changes in interest rates, the market's perception of issuers, and the creditworthiness of the parties involved. The ability of a Fund to successfully utilize these instruments may depend on the ability of the Sub-Advisers to forecast interest rates and other economic factors correctly. These securities may have a structure that makes their reaction to interest rate changes and other factors difficult to predict, making their value highly volatile.

In addition to the risks associated with other asset-backed securities as described above, mortgage-backed securities are subject to the general risks associated with investing in real estate securities; that is, they may lose value if the value of the underlying real estate to which a pool of mortgages relates declines. In addition, mortgage-backed securities comprised of subprime mortgages and investments in other asset-backed securities collateralized by subprime loans may be subject to a higher degree of credit risk and valuation risk. Additionally, such securities may be subject to a higher degree of liquidity risk, because the liquidity of such investments may vary dramatically over time.

Mortgage-backed securities may be issued by governments or their agencies and instrumentalities, such as, in the United States, Ginnie Mae, Fannie Mae and Freddie Mac. They may also be issued by private issuers but represent

an interest in or are collateralized by pass-through securities issued or guaranteed by a government or one of its agencies or instrumentalities. In addition, mortgage-backed securities may be issued by private issuers and be collateralized by securities without a government guarantee. Such securities usually have some form of private credit enhancement.

Pools created by private issuers generally offer a higher rate of interest than government and government-related pools because there are no direct or indirect government or agency guarantees of payments. Notwithstanding that such pools may be supported by various forms of private insurance or guarantees, there can be no assurance that the private insurers or guarantors will be able to meet their obligations under the insurance policies or guarantee arrangements. A Fund may invest in private mortgage pass-through securities without such insurance or guarantees. Any mortgage-backed securities that are issued by private issuers are likely to have some exposure to subprime loans as well as to the mortgage and credit markets generally. In addition, such securities are not subject to the underwriting requirements for the underlying mortgages that would generally apply to securities that have a government or government-sponsored entity guarantee, thereby increasing their credit risk. The risk of non-payment is greater for mortgage-related securities that are backed by mortgage pools that contain subprime loans, but a level of risk exists for all loans. Market factors adversely affecting mortgage loan repayments may include a general economic downturn, high unemployment, a general slowdown in the real estate market, a drop in the market prices of real estate, or an increase in interest rates resulting in higher mortgage payments by holders of adjustable-rate mortgages.

Municipal Securities Risk (Total Return Bond ETF Only). Municipal securities may be general obligation or revenue bonds and typically are issued to finance public projects, such as roads or public buildings, to pay general operating expenses or to refinance outstanding debt. Municipal securities may also be issued for private activities, such as housing, medical and educational facility construction or for privately owned industrial development and pollution control projects. General obligation bonds are backed by the full faith and credit and taxing authority of the issuer and may be repaid from any revenue source. Revenue bonds may be repaid only from the revenues of a specific facility or source. A Fund also may purchase municipal securities that represent lease obligations. These carry special risks because the issuer of the bonds may not be obligated to appropriate money annually to make payments under the lease. The yields on municipal bonds are dependent on a variety of factors, including prevailing interest rates and the condition of the general money market and the municipal bond market, the size of a particular offering, the maturity of the obligation and the rating of the issuer. The market value of municipal bonds will vary with changes in interest rate levels and as a result of changing evaluations of the ability of bond issuers to meet interest and principal payments.

Certain municipal securities may not be registered with the SEC or any state securities commission and will not be listed on any national securities exchange. The amount of public information available about the municipal securities to which a Fund may be economically exposed is generally less than that for corporate bonds and certain other securities, and the investment performance of a Fund's investments in municipal securities may therefore be dependent on the analytical abilities of the Sub-Advisers. The secondary market for municipal securities, particularly non-investment grade bonds, also tends to be less well-developed or liquid than many other securities markets, which may adversely affect a Fund's ability to sell such securities at attractive prices.

In addition, certain state and municipal governments that issue securities may be under significant economic and financial stress and may not be able to satisfy their obligations. The ability of municipal issuers to make timely payments of interest and principal may be diminished during general economic downturns and as governmental cost burdens are reallocated among Federal, state and local governments. The taxing power of any governmental entity may be limited by provisions of state constitutions or laws and an entity's credit generally will depend on many factors, including the entity's tax base, the extent to which the entity relies on Federal or state aid, and other factors which are beyond the entity's control.

In addition, issuers of municipal securities might seek protection under the bankruptcy laws. In the event of bankruptcy of such an issuer, holders of municipal bonds could experience delays in collecting principal and interest and such holders may not, in all circumstances, be able to collect all principal and interest to which they are entitled. To enforce its rights in the event of a default in the payment of interest or repayment of principal, or both, a Fund may take possession of and manage the assets securing the issuer's obligations on such securities, which may increase a Fund's operating expenses.

Non-Diversification Risk. Because each Fund is non-diversified, it may be more sensitive to economic, business, political or other changes affecting individual issuers or investments than a diversified fund, which may result in greater fluctuation in the value of a Fund's Shares and greater risk of loss.

New Fund Risk. Each Fund is a recently organized management investment company with limited operating history. As a result, prospective investors have limited track record or history on which to base their investment decision. There can be no assurance that a Fund will grow to or maintain an economically viable size.

Rating Agencies Risk. Rating agencies may fail to make timely changes in credit ratings and an issuer's current financial condition may be better or worse than a rating indicates. In addition, rating agencies are subject to an inherent conflict of interest because they are often compensated by the same issuers whose securities they grade.

Real Estate Sector Risk. The risk that real estate-related investments may decline in value as a result of factors affecting the real estate sector, such as the supply of real property in certain markets, changes in zoning laws, delays in completion of construction, changes in real estate values, changes in property taxes, levels of occupancy, and local, regional, and general market conditions.

Repurchase Agreement Risk. Repurchase agreements typically involve the acquisition by a Fund of fixed-income securities from a selling financial institution such as a bank or broker-dealer. The agreement provides that a Fund will sell the securities back to the institution at a fixed time in the future. Repurchase agreements involve the risk that a seller will become subject to bankruptcy or other insolvency proceedings or fail to repurchase a security from a Fund. In such situations, a Fund may incur losses including as a result of (i) a possible decline in the value of the underlying security during the period while a Fund seeks to enforce its rights thereto, (ii) a possible lack of access to income on the underlying security during this period, and (iii) expenses of enforcing its rights.

Reverse Repurchase Agreement Risk. A reverse repurchase agreement is the sale by a Fund of a debt obligation to a party for a specified price, with the simultaneous agreement by a Fund to repurchase that debt obligation from that party on a future date at a higher price. Similar to borrowing, reverse repurchase agreements provide a Fund with cash for investment purposes, which creates leverage and subjects a Fund to the risks of leverage, including increased volatility. Reverse repurchase agreements also involve the risk that the other party may fail to return the securities in a timely manner or at all. A Fund could lose money if it is unable to recover the securities and the value of collateral held by a Fund, including the value of the investments made with cash collateral, is less than the value of securities. Reverse repurchase agreements also create Fund expenses and require that a Fund have sufficient cash available to purchase the debt obligations when required. Reverse repurchase agreements also involve the risk that the market value of the debt obligation that is the subject of the reverse repurchase agreement could decline significantly below the price at which a Fund is obligated to repurchase the security. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, a Fund's use of the proceeds from the sale of the securities may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce a Fund's obligations to repurchase the securities. Reverse repurchase agreements also may be viewed as borrowings made by the Fund and are a form of leverage which also may increase the volatility of a Fund.

Structured Products Risk. Investments in securities that are backed by, or represent interests in, an underlying pool of securities or other assets involve the risks associated with the underlying assets, and may also involve different or greater risks, including the risk that distributions from the underlying assets will be inadequate to make interest or other payments to the Fund, the risk that the issuer of the securities will fail to administer the underlying assets properly or become insolvent, and the risk that the securities will be less liquid than other Fund investments.

The ability of the Structured Product to make distributions will be subject to various limitations, including the terms and covenants of the debt it issues. For example, performance tests (based on interest coverage or other financial ratios or other criteria) may restrict a Fund's ability, as holder of the equity interests in a Structured Product, to receive cash flow from these investments. There is no assurance any such performance tests will be satisfied. Also, a Structured Product may take actions that delay distributions in order to preserve ratings and to keep the cost of present and future financings lower or the Structured Product may be obligated to retain cash or other assets to satisfy over-collateralization requirements commonly provided for holders of the Structured Product's debt. As a result, there may be a lag, which could be significant, between the repayment or other realization on a loan or other assets in, and the distribution of cash out of, a Structured Product, or cash flow may be completely restricted for the

life of the Structured Product. If a Fund does not receive cash flow from any such Structured Product that is necessary to satisfy the annual distribution requirement for maintaining a Fund's RIC status, and a Fund is unable to obtain cash from other sources necessary to satisfy this requirement, a Fund could fail to maintain its status as a RIC, which would have a material adverse effect on a Fund's financial performance.

Structured Products are typically privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in certain Structured Products or other asset-backed securities may be characterized by a Fund as illiquid securities. A Fund may invest in any tranche of a Structured Product, including the subordinated/equity tranches. If applicable accounting pronouncements or SEC staff guidance require a Fund to consolidate the Structured Product's financial statements with a Fund's financial statements, any debt issued by the Structured Product would be generally treated as if it were issued by a Fund. Further, there can be no assurance that a bankruptcy court, in the exercise of its broad equitable powers, would not order that a Fund's assets and liabilities be substantively consolidated with those of a Structured Product, rather than kept separate, and that creditors of the Structured Product would have claims against the consolidated bankruptcy estate (including a Fund's assets). If a Structured Product is not consolidated with a Fund, a Fund's only interest in the Structured Product will be the value of its retained subordinated interest and the income allocated to it, which may be more or less than the cash a Fund received from the Structured Product, and none of the Structured Product's liabilities would be reflected as a Fund's liabilities. If the assets of a Structured Product are not consolidated with a Fund's assets and liabilities, then the leverage incurred by such Structured Product may or may not be treated as borrowings by a Fund for purposes applicable limitations on a Fund's ability to issue debt.

In addition to the general risks associated with fixed-income securities discussed herein, Structured Products carry additional risks, including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the possibility that the investments in Structured Products are subordinate to other classes or tranches thereof; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

The activities of the issuers of certain Structured Products will generally be directed by a collateral manager. In a Fund's capacity as holder of interests in such a Structured Product, a Fund is generally not able to make decisions with respect to the management, disposition or other realization of any investment, or other decisions regarding the business and affairs, of the Structured Product. Consequently, the success of the securitizations in will depend, in part, on the financial and managerial expertise of the collateral manager.

To the extent that an affiliate of the Sub-Advisers serves as the sponsor and/or collateral manager of a Structured Product in which a Fund invests, or the Sub-Advisers or their respective affiliates hold other interests in Structured Products in which a Fund invests, a Fund may be limited in its ability to participate in certain transactions with the Structured Product and may not be able to dispose of its interests in the Structured Product if no secondary market exists for the interests. Even if a secondary market exists, the Sub-Advisers or their respective affiliates at times may possess material non-public information that may restrict a Fund's ability to dispose of its interests in the Structured Product. A Fund does not currently contemplate making investments in any specific investments sponsored by the Sub-Advisers or their respective affiliates; however, to the extent a Fund does, it will do so only as permitted under the Investment Company Act of 1940, as amended (the "1940 Act") and the rules thereunder.

To the extent the Fund invests in the equity tranches of a Structured Product, such investments typically represent the first loss position, are unrated and are subject to greater risk. To the extent that any losses are incurred by the Structured Product in respect of any collateral, such losses will be borne first by the owners of the equity interests, which may include a Fund. Any equity interests that a Fund holds in a Structured Product will not be secured by the assets of the Structured Product or guaranteed by any party, and a Fund will rank behind all creditors of the Structured Product, including the holders of the secured notes issued by the Structured Product. Equity interests are typically subject to certain payment restrictions in the indenture governing the senior tranches. Accordingly, equity interests may not be paid in full, may be adversely impacted by defaults by a relatively small number of underlying assets held by the Structured Product and may be subject to up to 100% loss. Structured Products may be highly levered, and therefore equity interests may be subject to a higher risk of loss, including the potential for total loss. The market value of equity interests may be significantly affected by a variety of factors, including changes in interest rates, changes in the market value of the collateral held by the securitization, defaults and recoveries on that

collateral and other risks associated with that collateral. The leveraged nature of equity interest is likely to magnify these impacts. Equity interests typically do not have a fixed coupon and payments on equity interests will be based on the income received from the underlying collateral and the payments made to the senior tranches, both of which may be based on floating rates. While the payments on equity interest will be variable, equity interests may not offer the same level of protection against changes in interest rates as other floating rate instruments. Equity interests are typically illiquid investments and subject to extensive transfer restrictions, and no party is under any obligation to make a market for equity interests. At times, there may be no market for equity interests, and a Fund may not be able to sell or otherwise transfer equity interests at their fair value, or at all, in the event that it determines to sell them.

To-Be-Announced (“TBA”) Transactions Risk. TBA purchase commitments involve a risk of loss if the value of the securities to be purchased declines prior to settlement date or if the selling counterparty does not deliver the securities as promised. In TBA transactions, the selling counterparty does not specify the particular securities to be delivered. Instead, the purchasing counterparty agrees to accept any security that meets specified terms. TBA transactions involve counterparty risk. Default or bankruptcy of a selling counterparty to a TBA transaction would expose the purchasing counterparty to potential loss of its investment. TBA purchase commitments may be considered securities in themselves and involve a risk of loss if the value of the security to be purchased declines prior to the settlement date. Conversely, selling a TBA involves a risk of loss if the value of the securities to be sold goes up prior to the settlement date.

Underlying Fund Risk. Because each Fund may invest in Underlying Funds, a Fund’s investment performance may depend on the investment performance of the Underlying Funds. An investment in a Fund is subject to the risks associated with the Underlying Funds in which the Fund invests. A Fund will indirectly pay a proportional share of the expenses of Underlying Funds in which it invests (which may include operating expenses and management fees). Some Underlying Funds may not produce qualifying income for purposes of the “Income Requirement,” which must be met in order for each Fund to maintain its status as a regulated investment company under the Code. If one or more Underlying Funds generates more non-qualifying income for purposes of the “Income Requirement” than a Fund’s portfolio management expects, it could cause a Fund to inadvertently fail the “Income Requirement” thereby causing a Fund to inadvertently fail to qualify as a regulated investment company under the Code.

U.S. Government Securities Risk. The Fund may invest in U.S. Treasury obligations and securities issued or guaranteed by the U.S. Treasury. U.S. government securities are subject to market risk, interest rate risk and credit risk. Securities, such as those issued or guaranteed by the U.S. Treasury, that are backed by the full faith and credit of the United States are guaranteed only as to the timely payment of interest and principal when held to maturity and the market prices for such securities will fluctuate. Notwithstanding that these securities are backed by the full faith and credit of the United States, circumstances could arise that would prevent the payment of interest or principal.

Variable and Floating Rate Securities Risk. Floating or variable rate securities pay interest at rates that adjust in response to changes in a specified interest rate or reset at predetermined dates (such as the end of a calendar quarter). Securities with floating or variable interest rates are generally less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Conversely, floating rate securities will not generally increase in value if interest rates decline. Inverse floating rate securities may decrease in value if interest rates increase. Inverse floating rate securities may also exhibit greater price volatility than a fixed rate obligation with similar credit quality. When a Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and a Fund’s NAV.

FUND MANAGEMENT

Empowered Funds, LLC dba EA Advisers serves as each Fund’s investment adviser (the “Adviser”). The Adviser selects each Fund’s sub-adviser and oversees the sub-advisers’ management of the Funds. The Adviser also provides trading, execution and various other administrative services and supervises the overall daily affairs of the Funds. The Adviser is located at 19 East Eagle Road, Havertown, PA 19083 and is wholly-owned by Alpha Architect LLC. The Adviser is registered with the Securities and Exchange Commission (“SEC”) under the Investment Advisers Act of 1940, as amended (the “Advisers Act”) and provides investment advisory services to the Funds, other exchange-traded funds, and Alpha Architect, LLC, its parent company. The Adviser was founded in October 2013.

The Adviser performs its services to each Fund pursuant to the terms of an investment advisory agreement (the “Advisory Agreement”) between the EA Series Trust (the “Trust”) and the Adviser, each Fund will pay the Adviser an annual advisory fee based on its daily net assets payable at the annual rates set forth in the table below:

Fund	Advisory Fee
Strive Total Return Bond ETF	0.49%
Strive Enhanced Income Short Maturity ETF	0.25%

During the fiscal period from August 9, 2023 (commencement of Fund operations), through July 31, 2024, the aggregate advisory fee paid to the Adviser was \$339,288 and \$175,960 for STXT and BUXX, respectively.

The Adviser (or an affiliate of the Adviser) bears all of the Adviser’s own costs associated with providing these advisory services and all expenses of the Funds, except for the fee payment under the Advisory Agreement, payments under each Fund’s Rule 12b-1 Distribution and Service Plan (the “Plan”), brokerage expenses, acquired fund fees and expenses (including affiliated funds’ fees and expenses), taxes (including tax-related services), interest (including borrowing costs), litigation expenses (including class action-related services) and other non-routine or extraordinary expenses.

The Advisory Agreement for each Fund provides that it may be terminated at any time, without the payment of any penalty, by the Board or, with respect to the Fund, by a majority of the outstanding shares of the Fund, on 60 days’ written notice to the Adviser, and by the Adviser upon 60 days’ written notice, and that it shall be automatically terminated if it is assigned.

Investment Sub-Advisers

Strive Asset Management, LLC

The Adviser has retained Strive Asset Management, LLC (“Strive”), an investment adviser registered with the SEC under the Advisers Act, to provide sub-advisory services to the Funds. Strive is organized as an Ohio limited liability company with its principal offices located at 6555 Longshore Street, Suite 220, Dublin, OH 43017. Strive was founded in 2022. Strive has discretionary authority over all of the Funds’ investments, including security selection and transaction execution. Strive determines each Fund’s sector allocations and duration targets and has engaged, with the Adviser, Angel Oak, to be responsible for individual security selection and execution of Fund transactions.

Pursuant to a sub-advisory agreement (the “Sub-Advisory Agreement”), the Adviser pays Strive a fee, which is calculated daily and paid monthly, at an annual rate based on a Fund’s daily net assets as follows:

Fund	Sub-Advisory Fee
Strive Total Return Bond ETF	0.25%
Strive Enhanced Income Short Maturity ETF	0.13%

The Strive Sub-Advisory Agreement for each Fund provides that it may be terminated at any time, without the payment of any penalty, by the Board or by a majority of the outstanding shares of the Fund, on 60 days’ written notice to Strive, and by Strive upon 60 days’ written notice, and that it shall be automatically terminated if it is assigned.

Angel Oak Capital Advisors, LLC

The Adviser and Strive have retained Angel Oak Capital Advisors, LLC (“Angel Oak”), an investment adviser registered with the SEC under the Advisers Act, to provide sub-advisory services to the Funds. Angel Oak has its principal offices located at 3344 Peachtree Road NE, Suite 1725, Atlanta, Georgia 30326. Angel Oak was formed in 2009 by the Managing Partners of the Adviser, Michael A. Fierman, and Sreeniwas (Sreeni) V. Prabhu. Angel Oak is 93.3% owned by Angel Oak Asset Management Holdings, LLC. Subject to the supervision and oversight of Strive, the Adviser and the Board, and pursuant to a Sub-Advisory Agreement between the Strive, the Adviser and Angel Oak (the “Angel Oak Sub-Advisory Agreement”), Angel Oak is responsible for implementing the sector allocations and target duration provided by Strive by selecting the investments for each Fund in accordance with

such sector allocations and duration targets, subject to the investment objective, policies and limitations of each Fund.

Pursuant to the Angel Oak Sub-Advisory Agreement for each Fund, Strive pays Angel Oak a fee, which is calculated daily and paid monthly, at an annual rate based on a Fund's daily net assets as follows, subject to a minimum payment of \$100,000 per annum inclusive of both Funds:

Fund	Sub-Advisory Fee
Strive Total Return Bond ETF	0.16% of daily net assets up to \$250 million; plus 0.205% of daily net assets over \$250 million
Strive Enhanced Income Short Maturity ETF	0.055% of daily net assets up to \$250 million; plus 0.10% of daily net assets over \$250 million

The Angel Oak Sub-Advisory Agreement for each Fund provides that it may be terminated at any time, without the payment of any penalty, by the Board or by a majority of the outstanding shares of the Fund, on 60 days' written notice to Angel Oak, and by Angel Oak upon 60 days' written notice, and that it shall be automatically terminated if it is assigned.

Fund Sponsor

The Adviser has entered into a fund sponsorship agreement with Strive pursuant to which Strive is also the sponsor of each Fund ("Fund Sponsor"). Under this arrangement, the Fund Sponsor has agreed to provide financial support to each Fund (as described below) and, in turn, the Adviser has agreed to share with the Fund Sponsor a portion of profits, if any, generated by each Fund's Advisory Fee (also as described below). Every month, the Advisory Fee, which is a unitary management fee, is calculated and paid to the Adviser.

If the amount of the unitary management fee exceeds a Fund's operating expenses and the Adviser-retained amount, the Adviser pays the net total to the Fund Sponsor. The amount paid to the Fund Sponsor represents both the sub-advisory fee and any remaining profits from the Advisory Fee. During months where there are no profits or the funds are not sufficient to cover the entire sub-advisory fee, the sub-advisory fee is automatically waived.

If the amount of the unitary management fee is less than a Fund's operating expenses and the Adviser-retained amount, Fund Sponsor is obligated to reimburse the Adviser for the shortfall.

The Adviser-retained amount represents an agreed upon fee arrangement between the Adviser and Fund Sponsor. This arrangement calls for the Fund Sponsor to pay the Adviser a fee and reimburse the Adviser for certain Fund operating expenses it paid pursuant to the Advisory Agreement.

APPROVAL OF ADVISORY AGREEMENT & INVESTMENT SUB-ADVISORY AGREEMENT

A discussion regarding the basis for the Board's approval of the Advisory Agreement, the Strive Sub-Advisory Agreement, and the Angel Oak Sub-Advisory Agreement with respect to a Fund is available in the Funds' [semi-annual report](#) to shareholders for the period ended January 31, 2024.

PORTFOLIO MANAGERS

Mr. Matthew Cole and Mr. Jeffrey Sherman are co-Portfolio Managers at Strive who are primarily responsible for the day-to-day sector allocations and duration target for each Fund.

Mr. Cole has been with Strive since 2022, where he is Chief Executive Officer and Chief Investment Officer and the co-Portfolio Manager of each Fund since August 2023 (inception). Prior to Mr. Cole's tenure with Strive, Mr. Cole was a Fixed Income Portfolio Manager for a large U.S. pension fund. Mr. Cole served with the U.S. pension fund starting in 2011. Mr. Cole has a MBA in Finance and a B.Sc in Finance and Risk Management & Insurance from Sacramento State University. He is also a CFA® Charterholder.

Mr. Sherman has been with Strive since 2023 and the co-Portfolio Manager of each Fund since August 2023 (inception). Mr. Sherman joined the Sub-Adviser as a portfolio manager in 2023. Prior to Mr. Sherman's tenure with the Sub-Adviser, Mr. Sherman was a Quantitative Analyst for a large insurance company and built multi-asset model portfolios for an investment advisory platform. Additionally, Mr. Sherman worked as an Investment Officer in the Public Equities department of a large U.S. pension fund starting in 2017. Mr. Sherman holds a master's degree

in Quantitative Finance & Risk Analytics from Rensselaer Polytechnic Institute, and a bachelor's degree in Mathematics from the University at Albany, State University of New York.

Messrs. Clayton Triick and Ward Bortz are the portfolio managers at Angel Oak who are primarily responsible for the day-to-day security selection for each Fund.

Clayton Triick, CFA[®], is Head of Portfolio Management, Public Strategies of Angel Oak and a Portfolio Manager of each Fund since August 2023 (inception). Mr. Triick leads the investment approach and asset allocation strategy across Angel Oak's public mutual funds and exchange-traded funds. He also leads the investment committee. Mr. Triick emphasizes taking a full market cycle, team-based approach, to fixed income investing. He has deep experience across all aspects of investing in structured credit including credit analysis, trading, and risk management. He regularly contributes insights to national media outlets such as the Financial Times, Wall Street Journal, and Barron's. Mr. Triick has been in the investment management industry since 2008 and has experience across multiple sectors of fixed income. Prior to joining Angel Oak in 2011, Mr. Triick worked for YieldQuest Advisors, where he was a member of the investment committee focusing on interest rate risk, currency risk, and commodity of the portfolios alongside directly managing the closed-end fund allocations within portfolios and individual accounts. Mr. Triick holds a B.B.A. in Finance from the Farmer School of Business at Miami University in Oxford, Ohio and holds the Chartered Financial Analyst (CFA[®]) designation.

Ward Bortz is an ETF Portfolio Manager of Angel Oak and a Portfolio Manager of each Fund since August 2023 (inception). Mr. Bortz's portfolio management responsibilities are focused on the firm's ETFs, asset allocation across the Angel Oak's fund complex, and strategy design. He has been in the financial services industry since 2006. Before joining Angel Oak, Mr. Bortz was a senior investment professional at some of the largest asset managers in the world, including Invesco, BlackRock and Dimensional Fund Advisors. He worked in a variety of roles including portfolio management, research, trading and strategy across fixed income, equities, and alternatives. Mr. Bortz holds a B.A. degree in Economics from the University of Chicago and an M.B.A. focused on finance and asset pricing from Columbia Business School.

The Funds' SAI provides additional information about the portfolio managers, including other accounts each manages, their ownership in each Fund, and compensation.

OTHER SERVICE PROVIDERS

Quasar Distributors, LLC ("Distributor") serves as the distributor of Creation Units (defined above) for the Funds on an agency basis. The Distributor does not maintain a secondary market in Shares.

U.S. Bancorp Fund Services, LLC, doing business as U.S. Bank Global Fund Services, is the administrator, fund accountant, and transfer agent for the Funds.

U.S. Bank National Association is the custodian for the Funds.

Practus, LLP, 11300 Tomahawk Creek Parkway, Suite 310, Leawood, Kansas 66211, serves as legal counsel to the Trust.

Tait, Weller & Baker LLP, 50 South 16th Street, Suite 2900, Philadelphia, Pennsylvania 19102, serves as the Funds' independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Funds.

THE EXCHANGE

Shares are not sponsored, endorsed or promoted by the Exchange. The Exchange is not responsible for, nor has it participated, in the determination of the timing of, prices of, or quantities of Shares to be issued, nor in the determination or calculation of the equation by which Shares are redeemable. The Exchange has no obligation or liability to owners of Shares in connection with the administration, marketing or trading of Shares. Without limiting any of the foregoing, in no event shall the Exchange have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

BUYING AND SELLING FUND SHARES

Each Fund issues and redeems Shares at NAV only in large blocks known as “Creation Units,” which only APs (typically, broker-dealers) may purchase or redeem. Creation Units are generally issued and redeemed only in-kind for securities although a portion may be in cash.

Shares will trade on the secondary market, however, which is where most retail investors will buy and sell Shares. It is expected that only a limited number of institutional investors, called Authorized Participants or “APs,” will purchase and redeem Shares directly from the Funds. APs may acquire Shares directly from the Funds, and APs may tender their Shares for redemption directly to the Funds, at NAV per Share only in large blocks, or Creation Units. Purchases and redemptions directly with the Funds must follow the Funds’ procedures, which are described in the SAI.

Except when aggregated in Creation Units, Shares are not redeemable with the Funds.

BUYING AND SELLING SHARES ON THE SECONDARY MARKET

Most investors will buy and sell Shares in secondary market transactions through brokers and, therefore, must have a brokerage account to buy and sell Shares. Shares can be bought or sold through your broker throughout the trading day like shares of any publicly traded issuer. The Trust does not impose any redemption fees or restrictions on redemptions of Shares in the secondary market. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered prices in the secondary market for Shares. The price at which you buy or sell Shares (*i.e.*, the market price) may be more or less than the NAV of the Shares. Unless imposed by your broker, there is no minimum dollar amount you must invest in a Fund and no minimum number of Shares you must buy.

Shares of each Fund are listed on the Exchange under the following symbol:

Fund	Trading Symbol
Strive Total Return Bond ETF	STXT
Strive Enhanced Income Short Maturity ETF	BUXX

The Exchange is generally open Monday through Friday and is closed for weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Washington’s Birthday, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day.

For information about buying and selling Shares on the Exchange or in the secondary markets, please contact your broker or dealer.

Book Entry. Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”), or its nominee, will be the registered owner of all outstanding Shares and is recognized as the owner of all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely on the procedures of DTC and its participants. These procedures are the same as those that apply to any stocks that you hold in book entry or “street name” through your brokerage account. Your account information will be maintained by your broker, which will provide you with account statements, confirmations of your purchases and sales of Shares, and tax information. Your broker also will be responsible for distributing income dividends and capital gain distributions and for ensuring that you receive shareholder reports and other communications from each Fund.

Share Trading Prices. The trading prices of Shares may differ from the applicable Fund’s daily NAV and can be affected by market forces of supply and demand for Shares, the prices of the applicable Fund’s portfolio securities, economic conditions and other factors.

The Exchange through the facilities of the Consolidated Tape Association or another market information provider intends to disseminate the approximate value of a Fund’s portfolio every fifteen seconds during regular U.S. trading

hours. This approximate value should not be viewed as a “real-time” update of the NAV of a Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day. The quotations for certain investments may not be updated during U.S. trading hours if such holdings do not trade in the U.S., except such quotations may be updated to reflect currency fluctuations. Each Fund is not involved in, or responsible for, the calculation or dissemination of the approximate values and makes no warranty as to the accuracy of these values.

Continuous Offering. The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by a Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirements and liability provisions of the Securities Act. For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the Investment Company Act of 1940, as amended (the “Investment Company Act”). As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an overallotment within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

ACTIVE INVESTORS AND MARKET TIMING

The Board has evaluated the risks of market timing activities by the Funds’ shareholders. The Board noted that Shares can be purchased and redeemed directly from a Fund only in Creation Units by APs and that the vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Funds, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Funds’ trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with a Fund, to the extent effected in-kind (*i.e.*, for securities), the Board noted that those trades do not cause the harmful effects (as previously noted) that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, the Board noted that those trades could result in dilution to a Fund and increased transaction costs, which could negatively impact the Funds’ ability to achieve its investment objective, although in certain circumstances (*e.g.*, in conjunction with a reallocation of a Fund’s investments), such trades may benefit Fund shareholders by increasing the tax efficiency of a Fund. The Board also noted that direct trading by APs is critical to ensuring that Shares trade at or close to NAV. In addition, the Funds will impose transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by a Fund in effecting trades. Given this structure, the Board determined that it is not necessary to adopt policies and procedures to detect and deter market timing of Shares.

DISTRIBUTION AND SERVICE PLAN

Each Fund has adopted the Plan pursuant to Rule 12b-1 under the Investment Company Act. Under the Plan, a Fund may be authorized to pay distribution fees of up to 0.25% of its average daily net assets each year to the Distributor and other firms that provide distribution and shareholder services (“Service Providers”). As of the date of this Prospectus, the maximum amount payable under the Plan is set at 0% until further action by the Board. In the event

12b-1 fees are charged, over time they would increase the cost of an investment in a Fund because they would be paid on an ongoing basis.

NET ASSET VALUE

The NAV of Shares is calculated each business day as of the close of regular trading on the New York Stock Exchange (“NYSE”), generally 4:00 p.m., Eastern time.

Each Fund calculates its NAV per Share by:

- Taking the current market value of its total assets,
- Subtracting any liabilities, and
- Dividing that amount by the total number of Shares owned by shareholders.

If you buy or sell Shares on the secondary market, you will pay or receive the market price, which may be higher or lower than NAV. Your transaction will be priced at NAV only if you purchase or redeem your Shares in Creation Units.

Equity securities that are traded on a national securities exchange, except those listed on the NASDAQ Global Market® (“NASDAQ”) are valued at the last reported sale price on the exchange on which the security is principally traded. Securities traded on NASDAQ will be valued at the NASDAQ Official Closing Price (“NOCP”). If, on a particular day, an exchange-traded or NASDAQ security does not trade, then the most recent quoted bid for exchange traded or the mean between the most recent quoted bid and ask price for NASDAQ securities will be used. Equity securities that are not traded on a listed exchange are generally valued at the last sale price in the over-the-counter market. If a nonexchange traded security does not trade on a particular day, then the mean between the last quoted closing bid and asked price will be used.

Fixed income investments for which market quotations are readily available are valued at market value, which is ordinarily determined based on official closing prices or the last reported sale prices of an instrument. Where no such closing price or sale price is reported, market value is determined based on quotes obtained from market makers or prices supplied by one or more third-party pricing source (“Pricing Services”), which may include evaluated prices. The types of investments in which the Funds typically invest are generally valued on the basis of evaluated prices provided by Pricing Services. Such prices may be based on a number of factors, including, among other things, information obtained from market makers and estimates based on recent market prices for investments with similar characteristics.

Redeemable securities issued by open-end investment companies are valued at the investment company’s applicable net asset value, with the exception of exchange-traded open-end investment companies which are priced as equity securities.

If a market price is not readily available or is deemed not to reflect market value, the relevant Fund will determine the price of the security held by the Fund based on a determination of the security’s fair value pursuant to policies and procedures approved by the Board.

To the extent a Fund holds securities that may trade infrequently, fair valuation may be used more frequently. Fair valuation may have the effect of reducing stale pricing arbitrage opportunities presented by the pricing of Shares. However, when a Fund uses fair valuation to price securities, it may value those securities higher or lower than another fund would have priced the security. Also, the use of fair valuation may cause the Shares’ NAV performance to diverge from the Shares’ market price and from the performance of various benchmarks used to compare a Fund’s performance because benchmarks generally do not use fair valuation techniques. Because of the judgment involved in fair valuation decisions, there can be no assurance that the value ascribed to a particular security is accurate.

FUND WEBSITE AND DISCLOSURE OF PORTFOLIO HOLDINGS

Strive maintains a website for each Fund at www.strivefunds.com. Among other things, the website includes this Prospectus and the SAI, each Fund’s holdings, and each Fund’s [annual](#) and [semi-annual](#) reports. The website shows each Fund’s daily NAV per share, market price, and premium or discount, each as of the prior business day. The

website also shows the extent and frequency of each Fund's premiums and discounts. Further, the website includes each Fund's median bid-ask spread over the most recent thirty calendar days.

Each day a Fund is open for business, the Trust publicly disseminates each Fund's full portfolio holdings as of the close of the previous day through its website at www.strivefunds.com. A description of the Trust's policies and procedures with respect to the disclosure of the Funds' portfolio holdings is available in the Funds' SAI.

INVESTMENTS BY OTHER INVESTMENT COMPANIES

For purposes of the Investment Company Act, Shares are issued by a registered investment company and purchases of such Shares by registered investment companies and companies relying on Section 3(c)(1) or 3(c)(7) of the Investment Company Act are subject to the restrictions set forth in Section 12(d)(1) of the Investment Company Act, except as permitted by Rule 6c-11, Rule 12d1-4, or an exemptive order of the SEC.

DIVIDENDS, DISTRIBUTIONS, AND TAXES

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an IRA, you need to be aware of the possible tax consequences when:

- Your Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Dividends and Distributions

Dividends and Distributions. Each Fund has elected and intends to qualify each year as a regulated investment company under the Internal Revenue Code of 1986, as amended. As a regulated investment company, a Fund generally pays no U.S. federal income tax on the income and gains it distributes to you. Each Fund expects to declare and to distribute its net investment income, if any, to shareholders as dividends monthly. Each Fund will distribute net realized capital gains, if any, at least annually. A Fund may distribute such income dividends and capital gains more frequently, if necessary, in order to reduce or eliminate U.S. federal excise or income taxes on the Fund. The amount of any distribution will vary, and there is no guarantee a Fund will pay either an income dividend or a capital gains distribution. Distributions may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Avoid "Buying a Dividend." At the time you purchase Shares of a Fund, the Fund's NAV may reflect undistributed income, undistributed capital gains, or net unrealized appreciation in value of portfolio securities held by the Fund. For taxable investors, a subsequent distribution to you of such amounts, although constituting a return of your investment, would be taxable. Buying Shares in a Fund just before it declares an income dividend or capital gains distribution is sometimes known as "buying a dividend."

Taxes

As with any investment, you should consider how your investment in the Fund will be taxed. The tax information below is provided as general information. More tax information is available in the SAI. You should consult your tax adviser about the federal, state, local or foreign tax consequences of your investment in the Fund. Except as otherwise noted, the tax information provided assumes that you are a U.S. citizen or resident.

Unless your investment is through an IRA or other tax-advantaged account, you should carefully consider the possible tax consequences of Fund distributions and the sale of your Fund Shares.

Distributions. Each Fund contemplates declaring as dividends each year all or substantially all of its taxable income. Distributions you receive from a Fund are generally subject to federal income tax and may also be subject to state or local taxes. This is true whether you reinvest your distributions in additional Fund Shares or receive them in cash. For federal tax purposes, a Fund's distributions attributable to net investment income and short-term capital gains

are taxable to you as ordinary income while distributions of long-term capital gains, if any, are taxable to you as long-term capital gains, no matter how long you have owned your Fund Shares.

Under current provisions of the Code, the maximum individual rate applicable to long-term capital gains is generally either 15% or 20%, depending on whether the individual's income exceeds certain threshold amounts. The preferential rate described above also applies to certain qualifying dividend income, but Fund distributions will generally not qualify for that favorable treatment and also will generally not qualify for the corporate dividends received deduction because each Fund will generally be earning interest income rather than dividend income.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of your investment to the extent of your basis in the Shares, and generally as capital gain thereafter. A return of capital, which for tax purposes is treated as a return of your investment, reduces your basis in shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition of shares. A distribution will reduce a Fund's NAV per share and may be taxable to you as ordinary income or capital gain even though, from an economic standpoint, the distribution may constitute a return of capital.

An additional 3.8% Medicare tax is imposed on certain net investment income (including ordinary dividends and capital gain distributions received from the Fund and net gains from redemptions or other taxable dispositions of Fund Shares) of U.S. individuals, estates, and trusts to the extent that such person's "modified adjusted gross income" (in the case of an individual) or "adjusted gross income" (in the case of an estate or trust) exceeds certain threshold amounts.

Investments in lower-rated securities may present special tax issues for the Funds to the extent actual or anticipated defaults may be more likely with respect to those kinds of securities. Tax rules are not entirely clear about issues such as when an investor in such securities may cease to accrue interest, original issue discount, or market discount; when and to what extent deductions may be taken for bad debts or worthless securities; how payments received on obligations in default should be allocated between principal and income; and whether exchanges of debt obligations in a workout context are taxable. These and other issues will generally need to be addressed by a Fund, in the event it invests in such securities, so as to seek to eliminate or to minimize any adverse tax consequences. A Fund's transactions in derivatives (such as futures contracts and swaps) will be subject to special tax rules, the effect of which may be to accelerate income to the Fund, defer losses to the Fund, cause adjustments in the holding periods of the Fund's securities and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing, and character of distributions to you. The Fund's use of derivatives may result in the Fund realizing more short-term capital gains and ordinary income subject to tax at ordinary income tax rates than it would if it did not use derivatives.

Although distributions are generally treated as taxable to you in the year they are paid, distributions declared in October, November, or December but paid in January are taxable as if they were paid in December. Character and tax status of all distributions will be available to shareholders after the close of each calendar year.

The Funds may be subject to foreign withholding or other foreign taxes on income or gain from certain foreign securities. In general, the Fund may deduct these taxes in computing its taxable income.

If you buy Shares of a Fund before it makes a distribution, the distribution will be taxable to you even though it may actually be a return of a portion of your investment. This is known as "buying into a dividend."

Taxes on Creations and Redemptions of Creation Units. A person who exchanges securities for Creation Units generally will recognize a gain or loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of exchange and the sum of the exchanger's aggregate basis in the securities surrendered and the amount of any cash paid for such Creation Units. A person who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of primarily securities for Creation Units cannot be deducted currently under the rules governing "wash sales," or on the basis that there has been no significant change in economic position. Persons exchanging securities for Creation Units or redeeming Creation Units should consult their own tax adviser with respect to whether wash sale rules apply and when a loss might be deductible and the tax treatment of any creation or redemption transaction.

Under current U.S. federal income tax laws, any capital gain or loss realized upon a redemption (or creation) of Creation Units is generally treated as long-term capital gain or loss if the Shares (or securities surrendered) have been held for more than one year and as a short-term capital gain or loss if the Shares (or securities surrendered) have been held for one year or less.

Sales of Fund Shares. Your sale of Fund Shares is a taxable transaction for federal income tax purposes and may also be subject to state and local taxes. When you sell your Shares, you will generally recognize a capital gain or loss in an amount equal to the difference between your adjusted tax basis in the Shares and the amount received. Generally, this capital gain or loss is long-term or short-term depending on whether your holding period exceeds one year, except that any loss realized on Shares held for six months or less will be treated as a long-term capital loss to the extent of any long-term capital gain dividends that were received on the Shares. Additionally, any loss realized on a sale, exchange or redemption of Shares of the Fund may be disallowed under “wash sale” rules to the extent the Shares disposed of are replaced with other Shares of that Fund within a period of 61 days beginning 30 days before and ending 30 days after the date of disposition, (such as pursuant to a dividend reinvestment in Shares of the Fund). If disallowed, the loss will be reflected in an adjustment to the basis of the Shares acquired.

Other Information. You may be subject to backup withholding at a rate of 24% with respect to taxable distributions if you do not provide your correct taxpayer identification number, or certify that it is correct, or if you have been notified by the IRS that you are subject to backup withholding.

Non-U.S. investors are generally subject to U.S. withholding tax and may be subject to estate tax with respect to their Fund shares. However, withholding is generally not required on properly designated distributions to non-U.S. investors of long-term capital gains. Non-U.S. investors generally are not subject to U.S. federal income tax withholding on certain distributions of interest income and/or short-term capital gains that are designated by the Fund. Although this designation will generally be made by the Fund for distributions of long-term and short-term capital gains, the Fund does not anticipate making any designations of interest income. Therefore, all distributions of interest income will generally be subject to withholding when paid to non-U.S. investors. More information about U.S. taxation and non-U.S. investors is included in the SAI.

Withholding of U.S. tax (at a 30% rate) is required with respect to payments of dividends made to certain non-U.S. entities that fail to comply (or be deemed compliant) with extensive reporting and withholding requirements designed to inform the U.S. Department of the Treasury of U.S.-owned foreign investment accounts. Shareholders may be requested to provide additional information to enable the applicable withholding agent to determine whether withholding is required.

Reporting to you and the IRS is required annually on Form 1099-B with respect to not only the gross proceeds of Fund Shares you sell or redeem but also their cost basis. Shareholders should contact their intermediaries with respect to reporting of cost basis and available elections with respect to their accounts. You should carefully review the cost basis information provided by the applicable intermediary and make any additional basis, holding period or other adjustments that are required when reporting these amounts on your federal income tax returns.

State and Local Taxes. Fund distributions and gains from the sale or exchange of your Shares generally are subject to applicable state and local taxes.

Foreign Tax Credits. If a Fund qualifies to pass through to you the tax benefits from foreign taxes it pays on its investments, and elects to do so, then any foreign taxes it pays on these investments may be passed through to you as a foreign tax credit.

Possible Tax Law Changes. At the time that this prospectus is being prepared, various administrative and legislative changes to the U.S. federal tax laws are under consideration, but it is not possible at this time to determine whether any of these changes will be made or what the changes might entail.

This discussion of “Dividends, Distributions and Taxes” is not intended or written to be used as tax advice. Because everyone’s tax situation is unique, you should consult your tax professional about U.S. federal, state, local or foreign tax consequences before making an investment in a Fund.

FINANCIAL HIGHLIGHTS

The financial highlights tables are intended to help you understand each Fund's financial performance for the period of such Fund's operations. Certain information reflects financial results for a single Share. The total returns in the table represent the rate that an investor would have gained (or lost) on an investment in a Fund (assuming reinvestment of all dividends and distributions). The information in the table below has been audited by Tait, Weller & Baker LLP, an independent registered public accounting firm, whose report, along with the Funds' financial statements, is included in the Funds' Annual Report, which is available upon request.

	Net Asset Value, Beginning of Period	Net Investment Income (Loss) ⁽¹⁾	Net Realized and Unrealized Gain (Loss) on Investments	Net Increase (Decrease) in Net Asset Value Resulting from Operations	Distributions from Net Investment Income	Total Distributions	Transaction Fee	Net Asset Value, End of Period	Total Return ⁽²⁾	Net Assets, End of Period (000's)	Net Expenses ⁽³⁾⁽⁴⁾	Net Investment Income (Loss) ⁽³⁾	Portfolio Turnover Rate ⁽⁵⁾
Strive Total Return Bond ETF													
For the Period August 9, 2023 ⁽⁶⁾ to July 31, 2024	\$ 20.00	1.04	0.21	1.25	(0.96)	(0.96)	N/A	\$ 20.29	6.45 %	\$101,856	0.49 %	5.35 %	51 %
Strive Enhanced Income Short Maturity ETF													
For the Period August 9, 2023 ⁽⁶⁾ to July 31, 2024	\$ 20.00	1.17	0.12	1.29	(1.04)	(1.04)	N/A	\$ 20.25	6.57 %	\$115,628	0.25 %	5.94 %	83 %

(1) Net investment income per share represents net investment income divided by the daily average shares of beneficial interest outstanding throughout the period.

(2) All returns reflect reinvested dividends, if any, but do not reflect the impact of taxes. Total return for a period of less than one year is not annualized.

(3) For periods of less than one year, these ratios are annualized.

(4) Net expenses include effects of any reimbursement or recoupment.

(5) Portfolio turnover is not annualized and is calculated without regard to short-term securities having a maturity of less than one year. Excludes the impact of in-kind transactions.

(6) Commencement of operations.

If you would like more information about the Funds and the Trust, the following documents are available free, upon request:

ANNUAL/SEMI-ANNUAL REPORTS TO SHAREHOLDERS

Additional information about each Fund is in its [annual](#) and [semi-annual](#) reports to shareholders and in Form N-CSR. The annual report explains the market conditions and investment strategies affecting a Fund's performance during the last fiscal year. In Form N-CSR, you will find each Fund's annual and semi-annual financial statements.

STATEMENT OF ADDITIONAL INFORMATION

The SAI dated November 30, 2024, which contains more details about the Funds, is incorporated by reference in its entirety into this Prospectus, which means that it is legally part of this Prospectus.
